Research Handbook on University Rankings Hazelkorn, Ellen, Mihut, Georgiana, 2021-12-10 Gathering unique and thoughtful contributions from leading international scholars this timely Research Handbook offers diverse perspectives on university rankings twenty years after the first global rankings emerged It presents an in depth analysis that reflects the current state of research on rankings their influence and impact *Global University Rankings* T. Erkkilä, 2013-09-26 Global University Rankings explores the novel topic of global university rankings and their effects on higher education in Europe The contributions in this volume outline different discourses on global university rankings and explore the related changes concerning European higher education policies disciplinary traditions and higher education institutions The first global university rankings were published less than a decade ago but these policy instruments have become highly influential in shaping the approaches and institutional realities of higher education The rankings have portrayed European academic institutions in a varying light There is intense reflexivity over the figures leading to ideational changes and institutional adaptation that take surprisingly similar forms in different European countries The contributions in this book critically assess global university rankings as a policy discourse that would seem to be instrumental to higher education reform throughout Europe **World University Rankings and the Future of Higher Education** Downing, Kevin, Ganotice, Jr., Fraide A., 2016-10-06 Delivering quality education to students while remaining competitive at an international level is only one of the many challenges universities face today To attain their goals universities must adopt new strategies to achieve academic excellence World University Rankings and the Future of Higher Education is a pivotal reference source for the latest scholarly research on the implementation of a ranking system for higher education institutions providing a thorough overview of the impacts of these rankings on educational quality Exploring the benefits and challenges of this system in a global context this book is ideally designed for academicians researchers students administrators and policy makers interested in the effects of university rankings in the education sector and beyond *University Rankings, Diversity, and the New Landscape of Higher Education*, 2019-02-18 University rankings are a relatively new phenomenon in higher education Although quite an established practice in the U S it is only within the last decade that attempts to analyse university performance have spread to the rest of the world and that we also have seen new global rankings appear rankings attempting to measure university performance beyond national borders No wonder that this trend is accompanied by a growing interest in studying rankings throughout the world This book is written as part of the effort to better understand rankings and their effects on higher education A serious approach towards university rankings implies that rankings should be analysed properly including the methods used and the indicators chosen and investigate the objectives claimed If university rankings are considered as consumer information then everyone should have an interest in basing such guidance on valid and reliable data and methodology A serious analysis should also discuss the wider implications of rankings as an

emerging phenomenon in higher education Consequently the contributions to this book investigate and analyse how different rankings work how they reach their conclusions and on what data and methodology they are built Furthermore it provides a critical reflection about the impact of rankings on higher education how and in what way rankings influence policy making the structure of the sector or the internal life of the sector

Influence of University Rankings on Institutions: Ethics, Controversies, and Competition Kayyali, Mustafa, 2025-10-16 The influence of university rankings on higher education institutions reveals ethical concerns controversies and increased global competition As rankings become a measure of academic prestige many universities align their strategies with ranking criteria sometimes at the expense of educational values This pursuit of higher rankings often drives institutions to invest in research output and international visibility while potentially neglecting teaching quality or community engagement Criticisms emerge over the transparency and fairness of ranking methodologies raising questions about their validity and the consequences they produce Further exploration into the ethical implications of rankings may reveal new contentious practices and competitive dynamics shaped by the prioritization of university rankings Influence of University Rankings on Institutions Ethics Controversies and Competition explores how the pursuit of higher university rankings influences institutional priorities behaviors and decision making processes It examines the ethical dilemmas methodological controversies and competitive pressures that arise from global ranking systems This book covers topics such as mental health teacher education and ethics and bias and is a useful resource for educators policymakers government officials psychologists academicians researchers and scientists

University Rankings William Yat Wai Lo, 2014-02-17 This book adopts a qualitative case study approach to provide the readers with a systematic delineation and interpretation of the implications of the university ranking phenomenon for Taiwan s higher education system It reviews the literature on different theories concerning the global transformation of higher education and presents basic information on higher education in Taiwan The author develops a four dimensional framework for the analysis of the ranking phenomenon in the island state First the technological ecological dimension aims to look into how the rankings have impacted Taiwan s higher education based on empirical findings from five Taiwanese public universities Next the technological geographical dimension examines how Taiwan can use rankings to promote its interests in global higher education The two conceptual dimensions focus on the relationship between the rankings and power in higher education They show how the phenomenon can be read and explained through theoretical lenses from ecological and geographical perspectives From an ecological perspective the empirical evidence suggests that the influence of rankings varies throughout the academic hierarchy in Taiwan The theoretical analysis then illustrates the relationship between the ranking phenomenon and the power structure in academic hierarchy Geographically while the empirical analysis is based on data from Taiwan the theoretical analysis offers essential insights that help readers to understand the changing global landscape of higher education and its implications in East Asia

Impact of Global University Ranking Systems on Developing Countries

Onyancha, Omwoyo Bosire, Tella, Adeyinka, 2023-06-01 The emotive discourses on the subject of university rankings are directly linked to the effect of such rankings on the performance of universities throughout the world. It has been observed that the top ranked universities attract major financial commitments from the industry, the best students, quality researchers and a wide range of other quality endowments such as equipment, libraries and laboratories. It is not surprising that the ranking of universities has gained popularity and become a significant factor shaping not only the reputation of universities but also the performance of said institutions around the world, including the developing countries. *Impact of Global University Ranking Systems on Developing Countries* presents a collection of perspectives from scholars and other stakeholders on the impact of the global ranking systems on developing countries. The book is an additional resource for discussion and discourse as far as the global university ranking systems are concerned and opens new frontiers for further research. Covering key topics such as assessment ethics and academic freedom, this premier reference source is ideal for administrators, policymakers, researchers, scholars, academicians, practitioners, instructors and students.

World University Rankings: Statistical Issues And Possible Remedies Kay Cheng Soh, 2017-03-08 World university ranking started one and a half decades ago for the purpose of understanding what makes an excellent institution of higher education. Subsequent to the appearance of the Academic Ranking of World Universities at the Shanghai Jiaotong University, there soon emerged the QS World University Rankings and the Times Higher Education World University Rankings. These three ranking systems are considered the classics as they are the fore runners, although no less than ten new systems have come to the arena. The various ranking systems adopt a common approach of weight and sum to process the indicator data. Each system somewhat arbitrarily decides on a set of indicators and assigns different weights to these, presumably reflecting their relative importance. This simple and simplistic approach meets well common sense. And in fact, much of the discussion on world university rankings is conducted at the commonsensical level. However, analyses conducted in the recent years uncovered several problems of the prevalent approach: spurious precision, mutual compensation, weight discrepancy, indicator redundancy, etc., which render the overall scores and ranking suspect in terms of validity. These are due to systems ignoring the fact that world university rankings are a form of social measurement and therefore need to be seen from this perspective. Moreover, rankings encourage competition and in the highly competitive world of today, it is natural that institutional attention is focused on the ranking results. By now, the original purpose of world university ranking seems to have been overshadowed and world university rankings look more like international academic contests as though they are annual sports meets. This monograph collects together many articles pertaining to the identified measurement and statistical issues of world university rankings and suggests remedies to make ranking results more trustworthy.

University Rankings Jung Cheol Shin, Robert K. Toutkoushian, Ulrich Teichler, 2011-06-06 This ground breaking and exhaustive analysis of university ranking surveys scrutinizes their theoretical bases, methodological issues, societal impact and policy implications, providing

readers with a deep understanding of these controversial comparators The authors propose that university rankings are misused by policymakers and institutional leaders alike They assert that these interested parties overlook the highly problematic internal logic of ranking methodologies even as they obsess over the surveys assessment of their status The result is that institutions suffer from short termism realigning their resources to maximize their relative rankings While rankings are widely used in policy and academic discussions this is the first book to explore the theoretical and methodological issues of ranking itself It is a welcome contribution to an often highly charged debate Far from showing how to manipulate the system this collection of work by key researchers aims to enlighten interested parties
