Corrigan, 2014-04-04 The time has come for Debunking ADHD and exposing how this invented disorder created to drug children does not exist. Despite unanimous agreement that no test exists to identify ADHD, 6.4 million American children are labeled ADHD. To make matters worse, approximately two-thirds of those children diagnosed ADHD are prescribed drugs with many dangerous side effects which include developing more serious mental disorders and death. After six decades of marketing stimulants and scaring parents into thinking something is seriously wrong with their highly creative, energetic and communicative children, ADHD drug manufacturers still claim they have no idea what ADHD drugs actually do to children's brains. They make such claims when research shows ADHD drugs cause permanent brain damage in lab animals. How can children reach their full potential if they are drugged? How can they dream about achieving greatness and release their imagination and creativity when they are drugged every day, year after year to do the opposite? This book provides you evidence to say no to ADHD and gives 10 Reasons to Stop Drugging Kids for Acting Like Kids. Nonlinear Partial Differential Equations Helge Holden, Kenneth H. Karlsen, 2012-01-14 The topic of the 2010 Abel Symposium hosted at the Norwegian Academy of Science and Letters, Oslo, was Nonlinear Partial Differential Equations, the study of which is of fundamental importance in mathematics and in almost all of natural sciences, economics and engineering. This area of mathematics is currently in the midst of an unprecedented development worldwide. Differential equations are used to model phenomena of increasing complexity and in areas that have traditionally been outside the realm of mathematics. New analytical tools and numerical methods are dramatically improving our understanding of nonlinear models. Nonlinearity gives rise to novel effects reflected in the appearance of shock waves, turbulence, material defects, etc., and offers challenging mathematical problems. On the other hand, new mathematical developments provide new insight in many applications. These proceedings present a selection of the latest exciting results by world-leading researchers. **Math Educ**, 2007.
