Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems. Thus it is par excellence a model of rational inquiry. Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades. Indeed the Enlightenment view of the rational human mind that reasons, makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century. Cognitive psychologists discovered that humans' thoughts and actions often deviate from rules imposed by strict normative theories of inference. Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats. Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem. This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education. We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program. In Simon's bounded rationality and its direct descendant ecological rationality, rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e.g. transitivity.

Gender Equity in Mathematics Education Incikabi, Lutfi, 2025-10-02 Gender equity in mathematics education remains a vital issue in the pursuit of inclusivity. Despite the progress that has been made in recent decades, there is still a disparity in gender representation in higher level math courses and STEM careers. Implicit bias and stereotypes continue to shape students' experiences and self-perceptions in mathematics classrooms. Addressing these challenges requires intentional efforts to promote equitable teaching practices, foster supportive learning cultures, and empower all students. Gender Equity in Mathematics Education explores gender equity in mathematics education. This book offers actionable interventions to improve educational outcomes for all genders. Covering topics such as classroom practice, gendered stereotypes, and parental mediation, this book is an excellent resource for researchers, academicians, educators, school leaders, policymakers, and more.

School Is A Joke Immaculata Chukwunyere, 2021-10-28 School Is a Joke: Ethnography of Inner City Public School Students' Perception and Sensemaking of School and Schooling explored minority and low SES inner city high school students' perception and sense making of school, schooling, learning, academic behaviors, and academic achievement through an integrated theory of human development, learning, and achievement. The author sought an understanding of the reason behind the persistent academic failure of inner city minority and low SES high school students as well as the academic achievement gap within and between this subgroup of students. Conducted in a high poverty, high minority comprehensive inner city high school in the south of the United States of America.

the aim of the study was threefold First the author explored the factors operating in high school students thoughts feelings actions and reactions to school and academic achievement Second she examined the mechanisms by which these factors operate Third she utilized an integrated humanistic paradigm in analyzing student learning and academic behavior the interaction between student characteristics and school processes and the school culture that emerged from the interaction The integrated framework for the study comprised of Bronfenbrenner s bioecological model of human development Bandura s sociocognitive theory of learning and Bourdieu s concept of habitus The study s findings have implication for student learning academic behavior and academic achievement school organization and functioning as well as administrative behavior and school culture

Numerical Development - From cognitive functions to neural underpinnings

Korbinian Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers
