(Formulae, Manufacturing Processes with Machinery & Equipment Details) 2nd Edition P. K.

Chattopadhyay, 2021-01-01 A wax is a simple lipid that is formed by the esterification of a long chain alcohol and a fatty acid. The alcohol might have anything from 12 to 32 carbon atoms. Waxes are found as coats on leaves and stems in nature. The wax helps to keep the plant from losing too much water. Waxes are utilized in a variety of applications around the world including packaging coatings, cosmetics, foods, adhesives, inks, castings, crayons, chewing gum, polishes, and candles. Waxing and polishing serve very distinct purposes in terms of process detailing. Waxing is a method of protecting the paint on the exterior of a vehicle. However, Polishing is what is done after a wax to ensure that the vehicle has that glossy shine. Wax does this by smoothing out the painted surface by filling swirls and scratches with a protective coating. The worldwide wax market is growing at a rate of 2.8 percent per year. Over the forecast period, rising demand for wax in various applications such as candles, packaging, rubber, plastic processing, cosmetics, toiletries, fire logs, adhesives, building boards, medicines, and home automotive polishes is expected to drive market expansion. The market for furniture polish is growing at a rate of 5.0 percent per year. Furniture polish is in high demand due to rising need for harm-resistant business and residential settings, increased furniture exports, and increased furniture production. This will propel the global furniture polish market forward. Increased disposable income as well as government investments in infrastructure development. The major contents of the book are: Vegetable Waxes, Paraffin Wax Compounds, Synthetic Mineral Waxes, Other Mineral Waxes, Polish Abrasives, Metal Cleaners, Polishes, Microcrystalline Waxes, Photographs of Machinery with Suppliers Contact Details, and Plant Layout Process Flow Chart. A comprehensive reference to the Wax and Polishes industry's manufacturing and business success. This book serves as a one-stop shop for information on the Wax and Polishes business, which offers several prospects for producers, retailers, and entrepreneurs. This is the only book that covers the entire information of commercial wax and polish manufacture. It provides a feast of how-to knowledge from concept through equipment purchase.

The Complete Technology Book of Essential Oils (Aromatic Chemicals) Reprint-2011 NIIR Board, 2011-02-09 Essential oils are also known as volatile oils, ethereal oils, or aetherolea, or simply as the oil of the plant from which they were extracted. Essential oils are generally used in perfumes, cosmetics, soaps, and other products for flavoring food and drink and for adding scents to incense and household cleaning products. Various essential oils have been used medicinally at different periods in history. Medical applications proposed by those who sell medicinal oils range from skin treatments to remedies for cancer and often are based solely on historical accounts of use of essential oils for these purposes. Interest in essential oils has revived in recent decades with the popularity of aromatherapy, a branch of alternative medicine that claims that essential oils and other aromatic compounds have curative effects. Oils are volatilized or diluted in carrier oil and used in massage, diffused in the air by a nebulizer heated over a candle flame, or burned as incense. This book describes about the physicochemical properties, chemical composition, distillation yield, quality of essential oils, process of extraction of essential oils, manufacture of essential oils, products derived from essential

oils and so on The book in your hands contains formulae processes and test parameters of different types of essential oils derived from different natural sources This is very helpful book for new entrepreneurs professionals institutions and for those who are already engaged in this field
