Gattone,2006-03-14 What is the role of the social scientist in public affairs How have changes in the structure of the university system and the culture of academia reshaped the opportunities and constraints facing contemporary scholars The Social Scientist as Public Intellectual addresses these and other questions by reviewing the ideas of seminal thinkers in Europe and the United States and relating their conclusions to today s world In this book Charles Gattone examines the analyses of Max Weber Thorstein Veblen Karl Mannheim Joseph Schumpeter C Wright Mills John Kenneth Galbraith and Pierre Bourdieu tracing their perspectives through two World wars the Cold War and into the present Gattone situates the ideas of these authors in historical context showing the ways the realities of their time fascism totalitarianism the rise of bureaucratic institutions and the expansion of industrial democracy informed their assessments regarding the place of the intellectual in the political realm He brings their work into the current context addressing the difficulties involved in bridging the gap between the ideas of scholarly inquiry and the practical realities of politics and examining the ways newer factors such as the mass media relate to the character and trajectories of popular sentiment Gattone argues that although political and economic institutions continue to influence the course of academic knowledge opportunities remain for social scientists to act independently and develop insight that can ultimately be of value to a wide spectrum of the population in the modern order Rather than follow the habit of striving to satisfy the narrow demands of

institutional supporters Gattone suggests that social scientists have the potential to approach their work from the standpoint of a broader orientation and address social issues as public intellectuals

Expanding Access to Research Data National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Data Access for Research Purposes, 2005-11-11 Policy makers need information about the nation ranging from trends in the overall economy down to

the use by individuals of Medicare in order to evaluate existing programs and to develop new ones This information often comes from research based on data about individual people households and businesses and other organizations collected by statistical agencies The benefit of increasing data accessibility to researchers and analysts is better informed public policy To realize this benefit a variety of modes for data access including restricted access to confidential data and unrestricted access to appropriately altered public use data must be used The risk of expanded access to potentially sensitive data is the increased probability of breaching the confidentiality of the data and in turn eroding public confidence in the data collection enterprise Indeed the statistical system of the United States ultimately depends on the willingness of the public to provide the information on which research data are based Expanding Access to Research Data issues guidance on how to more fully exploit these tradeoffs The panel s recommendations focus on needs highlighted by legal social and technological changes that have occurred during the last decade

Earth Observations from Space National Research Council,Division on Earth and Life Studies,Board on Atmospheric Sciences and Climate,Committee on Scientific Accomplishments of Earth Observations from Space,2008-01-17 Over the past 50 years thousands of satellites have been sent into space on missions to collect data about the Earth Today the ability to forecast weather climate and natural hazards depends critically on these satellite based observations At the request of the National Aeronautics and Space Administration the National Research Council convened a committee to examine the scientific accomplishments that have resulted from space based observations This book describes how the ability to view the entire globe at once uniquely available from satellite observations has revolutionized Earth studies and ushered in a new era of multidisciplinary Earth sciences In particular the ability to gather satellite images frequently enough to create movies of the changing planet is improving the

understanding of Earth's dynamic processes and helping society to manage limited resources and environmental challenges. The book concludes that continued Earth observations from space will be required to address scientific and societal challenges of the future.

Geography in America at the Dawn of the 21st Century Gary L. Gaile, Cort J. Willmott, 2005

Geography in America at the Dawn of the 21st Century surveys American geographers' current research in their specialty areas and tracks trends and innovations in the many subfields of geography. As such, it is both a state-of-the-discipline assessment and a topical reference. It includes an introduction by the editors and 47 chapters, each on a specific specialty. The authors of each chapter were chosen by their specialty group of the American Association of Geographers (AAG). Based on a process of review and revision, the chapters in this volume have become truly representative of the recent scholarship of American geographers. While it focuses on work since 1990, it additionally includes related prior work and work by non-American geographers. The initial *Geography in America* was published in 1989 and has become a benchmark reference of American geographical research during the 1980s. This latest volume is completely new and features a preface written by the eminent geographer Gilbert White.

Tourism and Earthquakes C. Michael Hall, Girish Prayag, 2020-10-08

This book offers a comprehensive overview of the relationship between tourism and earthquakes through all stages of a disaster. It discusses the measures available to manage tourism after earthquakes and examines the means to mitigate the potential impacts of earthquakes on tourism. The chapters address important questions such as: are tourists who come to earthquake regions immediately after an earthquake a benefit or a burden for recovery and should priority be given to evacuate tourists after an earthquake hits? The volume provides insights into the ethical, commercial, and socioeconomic issues facing tourism after a major earthquake. It will be useful to students and researchers in tourism studies, tourism planning, and marketing, natural hazards, and destination and disaster management.

Down to Earth National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Mapping Science Committee, Committee on Geography, Committee on the Geographic Foundation for Agenda 21, 2002-11-24

In 1992, world leaders adopted Agenda 21, the work program of the 1992 UN Conference on Environment and Development. This landmark event provided a political foundation and action items to facilitate the global transition toward sustainable development. The international community marked the tenth anniversary of this conference in Johannesburg, South Africa, in August 2002. *Down to Earth*, a component of the U.S. State Department's Geographic Information for Sustainable Development project for the World Summit, focuses on sub-Saharan Africa, with examples drawn from case study regions where the U.S. Agency for International Development and other agencies have broad experience. Although African countries are the geographic focus of the study, the report has broader applicability. *Down to Earth* summarizes the importance and applicability of geographic data for sustainable development and draws on experiences in African countries to examine how future sources and applications of geographic data could provide reliable support to decision makers as they work towards sustainable development. The committee emphasizes the potential of new

technologies such as satellite remote sensing systems and geographic information systems that have revolutionized data collection and analysis over the last decade
