Recent Advances in Peptide and Protein Delivery, 1998 *Therapeutic Peptides and Proteins* Ajay K. Banga, 1997-07-01 From the Preface At the time of this writing the American biotechnology and pharmaceutical industry has more than two dozen biotechnology derived therapeutic proteins on the market while several hundred are in various stages of human clinical trials or at the FDA for review Today more than a thousand companies are involved in biotechnology research with a total revenue of 7.7 billion for 1993 Therapeutic peptides and proteins are expected to mitigate suffering in coming years as anticancer agents hormones growth factors analgesics anti hypertensives and thrombolytics among others However the clinical application of these therapeutic peptides and proteins is limited by several problems such as lack of physical and chemical stability or the lack of desirable attributes for adequate absorption or distribution Thus as these therapeutic peptides and proteins are made available it will be essential to formulate these drugs into safe stable and efficacious delivery systems The pharmaceutical scientist involved in this effort needs to call upon the knowledge of several disciplines such as pharmaceutics medicinal chemistry biochemistry and microbiology and needs to keep abreast with the latest research in the published literature This book presents these principles in a simple interesting and practically useful manner for the benefit of scientists working in this area and to further research in this area This book will also provide useful information for students and academic researchers and add to their interest in this area The book should also be useful in a hospital setting to understand potential physicochemical stability problems that may result during reconstitution or administration of the new recombinant proteins Since this field is relatively new and rapidly evolving efforts were made to include very recent literature in the book As a result over 40% of the literature citations in the book are for the work published in the last two years

Peptide and Protein Interaction with Membrane Systems Sara Bobone, 2014-05-31 In her thesis Sara Bobone outlines spectroscopic studies of antimicrobial peptides AMPs which are promising lead compounds for drugs used to fight multidrug resistant bacteria Bobone shows that AMPs interact with liposomes and she clarifies the structure of pores formed by one of these molecules These results help us to understand how AMPs are selective for bacterial membranes and how their activity can be finely tuned by modifying their sequence Findings which solve several conundrums debated in the literature for years In

addition Bobone uses liposomes as nanotemplates for the photopolymerization of hydrogels exploiting the self assembly properties of phospholipids Bobone was able to trap an enzyme using nanometeric particles while still allowing its activity by the diffusion of substrates and products through the network of the polymer The innovative nano devices described in this thesis could solve many of the hurdles still hampering the therapeutic application of protein based drugs **Systems of**
