Tudenhöfner,2011-09-15 Inhaltsangabe Introduction Despite the widespread recognition that performance is important to the success of a project many software products fail to respond fast enough to user requests or to handle a certain amount of parallel business transactions This is because nowadays projects are result oriented where the focus is on functionality to be implemented Such projects do not pay high attention to application performance because it still does not have the particular importance that unit testing for example has Moreover today s development models usually consider performance management only in a limited way within their lifecycle and often follow what is known as the fix it later approach The fix it later approach concentrates on software correctness and defers performance considerations to the integration testing phase where additional hardware is added or a system is tuned when performance issues are detected The problem of neglecting performance management is that performance issues often do not emerge until an application is put into production where it is likely to suffer the consequences of a performance failure The consequences of performance failures can be increased operational costs increased development and hardware costs and damaged customer relations If severe performance issues are discovered during production it may be too expensive to re design a system or even impossible to add additional hardware in order to meet performance objectives Such projects are likely to be canceled and their costs will be unrecoverable To avoid such situations performance management should be integrated into an application s lifecycle from the beginning This means that performance objectives have to be defined early within a project and continually verified as an application evolves Having performance management integrated from the beginning allows to reduce overall project risk and costs because performance issues can be spotted and corrected early in the lifecycle and even before end users are affected Furthermore an application is extensively tested for its ability of reaching performance objectives before it is deployed to a production environment and exposed to real users NovaTec GmbH is a company providing IT services in the area of consulting project management software engineering application architectures provisioning performance management and process engineering The competences of NovaTec are logically grouped in **Computer Performance Evaluation and Benchmarking** David Kaeli,2009-01-20 This book constitutes the proceedings of the SPEC Benchmark Workshop 2009 held in Austin Texas USA on January 25th 2009 The 9 papers presented were carefully selected and reviewed for inclusion in the book The result is a collection of high quality papers discussing current issues in the area of benchmarking research and technology The topics covered are benchmark suites CPU benchmarking power thermal benchmarking and modeling and sampling techniques **Modeling and Processing for Next-Generation Big-Data Technologies** Fatos Xhafa,Leonard Barolli,Admir Barolli,Petra Papajorgji,2014-11-04 This book covers the latest advances in Big Data technologies and provides the readers with a comprehensive review of the state of the art in Big Data processing analysis analytics and other related topics It presents new models algorithms software solutions and methodologies covering the full data cycle from data gathering to their visualization and interaction and includes a set of case studies and best practices New research issues

challenges and opportunities shaping the future agenda in the field of Big Data are also identified and presented throughout the book which is intended for researchers scholars advanced students software developers and practitioners working at the forefront in their field

Performance Analysis and Grid Computing Vladimir Getov,Michael Gerndt,Adolfy Hoisie,Allen Malony,Barton Miller,2012-12-06 Past and current research in computer performance analysis has focused primarily on dedicated parallel machines However future applications in the area of high performance computing will not only use individual parallel systems but a large set of networked resources This scenario of computational and data Grids is attracting a great deal of attention from both computer and computational scientists In addition to the inherent complexity of parallel machines the sharing and transparency of the available resources introduces new challenges on performance analysis techniques and systems In order to meet those challenges a multi disciplinary approach to the multi faceted problems of performance is required New degrees of freedom will come into play with a direct impact on the performance of Grid computing including wide area network performance quality of service QoS heterogeneity and middleware systems to mention only a few
