WEEK 41 from Monday 5th to Sunday 11th of October Macrocycle IV, week 1 (Training week 19)

<u>Mon. 5th:</u> Tr. 70	* Act. Rec.	- 50' recovery session in a fitness centre
<u>Tue. 6th:</u> Tr. 71	* Low Int.	- 5' jogging slowly building up to 70% HR _{max} (+ 1 km)
	* Warm up	- 20' extensive warming up, mobilisation and stretching
	* Strength	- 6 x 25 sit-ups, separated by 6 x 10 push-ups, in addition to the regular set of strength and injury prevention exercises
	* High Int.	- <u>Set 1</u> Two lines are marked approx. 5 meters away from each side of one of the goal lines. The referees are divided into 3 groups based on their fitness level. The referees in the group with the best fitness (x) have to run the longest distance ($\pm$ 210 m), while the group with the weakest runners (z) covers a shorter distance (about 190 m), and the intermediate referees (y) start on the goal line and cover an intermediate distance (about 200 m). - All referees start at the end with the 3 lines and run together at a given speed to the opposite goal line, and immediately back to the starting position (40" max). After a given rest that equals the running time (40" max), they start the second run. A signal may be used to indicate when the referees have to reach the opposite line and the home position. - Referees do this first exercise 10 x (15' max). - 3' recovery

Team Sports Training Javier Mallo, 2020-03-10 Team Sports Training The Complexity Model presents a novel approach to team sports training examining football soccer rugby field hockey basketball handball and futsal through the paradigm of complexity Under a traditional prism these sports have been analyzed using a deterministic perspective where the constituent dimensions of the sportsmen were independently examined and treated in isolation It was expected that the body worked as a perfect machine and once all the components were maximized the sportsmen improved their performance If the same closed recipe was applied to all the players that formed part of the squad the global team performance was expected to be enhanced As much as these reductionistic models seem coherent when contrasted in practice we see that the reality of team sports is far more different from the closed conditions in which they were idealized Team sports contain variable heterogeneous and non linear constraints which require the development of a different logic to organize their training During the last years ecological psychology the dynamical systems theory or the constraints led approach have opened interesting fields of research from which many conceptual foundations can be applied to team sports Based in this contemporary framework the current book presents the study of the players and the teams as complex systems using coordination dynamics to explain the emergence of the self organisation episodes that characterize them In addition this thinking line provides the reader with the ability to apply all these innovative concepts to their practical training scenarios Altogether it is intended to challenge the reader to re think their training strategy and to develop an original theory and practice of training specific to team sports
