Brain, Attachment, Personality Susan Hart, 2018-05-08 This book is intended as an inspiration and as an introduction to what Susan Hart has called neuroaffective developmental psychology As an underlying theme throughout the book she seeks to emphasize the importance of attachment for the formation of personality in all its diversity This book presents a merger of systems that are not normally brought together in a structured psychodynamic context Thus it operates on three levels a neurobiological level an intrapsychological level and an interpersonal level It also focuses on the brain structures that are essential for the formation of relationships personality development and emotions It attempts to provide an understanding of the way that the uniquely human nervous system develops capacities for empathy mentalization and reflection that enable us to address such aspects as past and present interpersonal relations ethics art and aesthetics Susan Hart has endeavoured to make the text meaningful and comprehensible in order to make the topic interesting and inspiring to the reader and to spark an interest in further studies

The Dynamics of Connection David C. Bell, 2010-03-30 The Dynamics of Connection How Evolution and Biology Create Caregiving and Attachment describes the logic of giving love trust and nurturance Bowlby's theory of attachment provides an excellent starting point for an explanation of nurturance but there are some limitations in this theory especially its tendency to minimize the caregiving side of the relationship The book builds on and extends Bowlby's theory by examining the evolutionary evidence for both attachment and caregiving the origins of which can be seen in the earliest mammals It describes neurobiological research that has identified the brain

circuits that underlie caregiving and attachment The book then describes a theory of relationships based on these neurobiological circuits and the resulting human desire to give and receive emotional contact warmth and support The theory details the emotional logic of this relationship process The proactive connection process caregiving characteristic of parents involves a growing capacity for both empathy and responsibility In the receptive process attachment trust grows from the experience of being cared for and nurtured These processes coexist alongside other motivations with which they interact The Dynamics of Connection introduces a view of the dyadic social psychology of connection that underlies both parent child and close adult relationships It provides a description and explanation of parental and adult nurturance It gives a long needed account of the origins of social norms of parenting While building on the foundation of attachment theory David Bell brings together new insights from both evolutionary theory and neurobiology to deepen our understanding of caregiving and attachment
