You'll discover the theory of knowledge graphs then put them into practice with LLMs to build working intelligence systems. You'll learn to create KGs from first principles, go hands-on to develop advisor applications for real-world domains like healthcare and finance, build retrieval-augmented generation for LLMs and more. About the technology: Using knowledge graphs with LLMs reduces hallucinations, enables explainable outputs, and supports better reasoning. By naturally encoding the relationships in your data, knowledge graphs help create AI systems that are more reliable and accurate, even for models that have limited domain knowledge. About the book: *Knowledge Graphs and LLMs in Action* shows you how to introduce knowledge graphs constructed from structured and unstructured sources into LLM-powered applications and RAG pipelines. Real-world case studies for domain-specific applications from healthcare to financial crime detection illustrate how this powerful pairing works in practice. You'll especially appreciate the expert insights on knowledge representation and reasoning strategies. What's inside: Design knowledge graphs for real-world needs; Build KGs from structured and unstructured data; Apply machine learning to enrich, complete, and analyze graphs; Pair knowledge graphs with RAG systems. About the reader: For ML and AI engineers, data scientists, and data engineers. Examples in Python. About the author: Alessandro Negro is Chief Scientist at GraphAware and author of *Graph-Powered Machine Learning*.  Prof. Dr. Michael Kurwan, 2025-06-30

Document from the year 2025 in the subject Leadership and Human Resources
 Leadership language: English

abstract: In order to successfully implement sustainable changes in a company in the context of change processes, strong leadership is required at the top of a company, which should have a great deal of empathy and a sure instinct in order to position the company in the market in the long term and profitably. In order to successfully shape these sustainable changes, it will not be the famous power of the leader of the past, but will only work with the involvement of employees in the new world of work in the knowledge age, which is characterized by digitalization and artificial intelligence. This new form of leadership is also referred to as Leadership 2.0, in which it is important to retain top performers and in particular key personnel in the company in the long term, which is a very challenging leadership task in HR management. In

change processes a fundamental distinction must be made between incremental change management and radical change management. While incremental change takes place continuously and is integrated into everyday working life, radical change represents a strategic realignment of the company which is largely associated with staff reductions and is intended to change the corporate culture. This is particularly true in the case of restructuring where cost cutting programs play a decisive role in ensuring the long term survival of the company. Employees are more willing to go along with incremental change, also known as continuous improvement, than radical change as they could also be affected by staff cuts. This fuels employees' fears and therefore often leads to high staff turnover.
