Jones, Lavinia Hirsu, 2019-07-02 A landmark volume that explores the interconnected nature of technologies and rhetorical
practice Rhetorical Machines addresses new approaches to studying computational processes within the growing field of
digital rhetoric While computational code is often seen as value neutral and mechanical this volume explores the underlying
and often unexamined modes of persuasion this code engages In so doing it argues that computation is in fact rife with the
values of those who create it and thus has powerful ethical and moral implications From Socrates's critique of writing in
Plato's Phaedrus to emerging new media and internet culture the scholars assembled here provide insight into how
computation and rhetoric work together to produce social and cultural effects This multidisciplinary volume features
contributions from scholar practitioners across the fields of rhetoric computer science and writing studies It is divided into
four main sections Emergent Machines examines how technologies and algorithms are framed and entangled in rhetorical
processes Operational Codes explores how computational processes are used to achieve rhetorical ends Ethical Decisions
and Moral Protocols considers the ethical implications involved in designing software and that software's impact on

computational culture and the final section includes two scholars responses to the preceding chapters Three of the sections are prefaced by brief conversations with chatbots autonomous computational agents addressing some of the primary questions raised in each section At the heart of these essays is a call for emerging and established scholars in a vast array of fields to reach interdisciplinary understandings of human machine interactions This innovative work will be valuable to scholars and students in a variety of disciplines including but not limited to rhetoric computer science writing studies and the digital humanities

Optimizing Play Christopher A. Paul, 2024-05-14 An unexpected take on how games work what the stakes are for them and how game designers can avoid the traps of optimization The process of optimization in games seems like a good thing who wouldn t want to find the most efficient way to play and win As Christopher Paul argues in *Optimizing Play* however optimization can sometimes risk a tragedy of the commons where actions that are good for individuals jeopardize the overall state of the game for everyone else As he explains players inadvertently limit play as they theorycraft seeking optimal choices The process of developing a meta or the most effective tactic available structures decision making causing play to stagnate A stale meta then creates a perception that a game is solved and may lead players to turn away from the game Drawing on insights from game studies rhetoric the history of science ecology and game theory literature Paul explores the problem of optimization in a range of video games including Overwatch FIFA EA Sports FC NBA 2K Clash Royale World of Warcraft and League of Legends He also pulls extensively from data analytics in sports where the problem has progressed further and is even more intractable than it is in video games given the money sports teams invest to find an edge Finally Paul offers concrete and specific suggestions for how games can be developed to avoid the trap set by optimization run amok
