This book addresses the complex issue of human creativity in the age of Artificial Intelligence Artificial intelligence AI is increasingly being used to create texts images and musical compositions This increase in the application of AI within the creative industries can of course enhance human performance while producing creative and commercial challenges for human authors Against this background this book considers how current mechanisms for incentivising creativity including legal regulations such as copyright state funding and tax regimes are inadequate in the age of AI Acknowledging the opportunity that AI presents the book then proposes alternative regulatory mechanisms through which human creativity can be incentivised This book will appeal to scholars and researchers in the areas of socio legal studies intellectual property law media law and law and technology *A.I. Artificial intelligence, introduction to the issues and current trends* Pavel Bartoš, 2023-01-01 Artificial Intelligence AI often referred to by the acronym Artificial Intelligence is a fascinating and dynamically developing field that has far reaching implications for various sectors of human activity At its core it is the simulation of human intelligence in computer systems AI is capable of learning planning problem solving speech recognition visual perception and many other cognitive functions that were previously considered the exclusive domain of human thought

Artificial Intelligence and Universal Values Jay Friedenber, 2024-07-14 The field of value alignment or more broadly machine ethics is becoming increasingly important as artificial intelligence developments accelerate By alignment we mean giving a generally intelligent software system the capability to act in ways that are beneficial or at least minimally harmful to humans There are a large number of techniques that are being experimented with but this work often fails to specify what values exactly we should be aligning When making a decision an agent is supposed to maximize the expected utility of its value function Classically this has been referred to as happiness but this is just one of many things that people value In order to resolve this issue we need to determine a set of human values that represent humanity's interests Although this problem might seem intractable research shows that people of various cultures and religions actually share more in common than they realize In this book we review world religions moral philosophy and evolutionary psychology to elucidate a common set of shared values We then show how these values can be used to address the alignment problem and conclude with problems

and goals for future research The key audience for this book will be researchers in the field of ethics and artificial intelligence who are interested in or working on this problem These people will come from various professions and include philosophers computer programmers and psychologists as the problem itself is multi disciplinary
