Containers and Packaging , 1964 *Design for Manufacturability* David M. Anderson, 2020-05-11 Achieve any cost goals in half the time and achieve stable production with quality designed in right the first time Design for Manufacturability How to Use Concurrent Engineering to Rapidly Develop Low Cost High Quality Products for Lean Production is still the definitive work on DFM This second edition extends the proven methodology to the most advanced product development process with the addition of the following new unique and original topics which have never been addressed previously These topics show you how to Cut cost from 1 2 to 1 10 in 9 categories with ways to remove that much cost from product charges and pricing Commercialize innovation starting with Manufacturable Research and learning from the new section on scalability you will learn how to design products and processing equipment to quickly scale up to any needed demand or desired growth Design product families that can be built on demand in platform cells that also mass customize products to order Make Lean production easier to implement with much more effective results while making build to order practical with spontaneous supply chains and eliminating forecasted inventory by including an updated chapter on Designing Products for Lean Production The author s 30 years of experience teaching companies DFM based on pre class surveys and plant tours is the

foundation of this most advanced design process It includes incorporating dozens of proven DFM guidelines through up front concurrent engineering teamwork that cuts the time to stable production in half and curtails change orders for ramps rework redesign substituting cheaper parts change orders to fix the changes unstable design specs part obsolescence and late discovery of manufacturability issues at periodic design reviews This second edition is for the whole product development community including Engineers who want to learn the most advanced DFM techniques Managers who want to lead the most advanced product development Project team leaders who want to immediately apply all the principles taught in this book in their own micro climate Improvement leaders and champions who want to implement the above and ensure that the company can design products and versatile processing equipment for low volume high mix product varieties Designing half to a tenth of cost categories can avoid substituting cheap parts which degrades quality and encourages standardization and spontaneous supply chains which will encourage Lean initiatives Using cellular manufacturing to shift production between lines for mixed production of platforms and build to order to offer the fastest order fulfillment can beat any competitors delivery time

Robot Reliability and Safety B.S. Dhillon,2012-12-06 Robots are increasingly being used in industry to perform various types of tasks Some of the tasks performed by robots in industry are spot welding materials handling arc welding and routing The population of robots is growing at a significant rate in various parts of the world for example in 1984 a report published by the British Robot Association indicated a robot population distribution between Japan 64 600 Western Europe 20 500 and the United States 13 000 This shows a significant number of robots in use Data available for West Germany and the United Kingdom indicate that in 1977 there were 541 and 80 robots in use respectively and in 1984 these numbers went up to 6600 and 2623 respectively Just as for other engineering products the reliability and safety of robots are important A robot has to be safe and reliable An unreliable robot may become the cause of unsafe conditions high maintenance costs inconvenience etc Robots make use of electrical mechanical pneumatic electronic and hydraulic parts This makes their reliability problem a challenging task because of the many different sources of failures According to some published literature the best mean time between failures MTBF achieved by robots is only 2500 hours This means there is definite room for further improvement in robot reliability With respect to safety there have been five fatal accidents involving robots since 1978
