Lee,2009-08-06 Fantasy football has become one of my favorite pastimes of tens of millions of American males and there are literally hundreds of websites books magazines and television shows designed to tell you everything you need to know about the subject Almost everything that is Anyone who has ever tried to find a definitive way to rank players for their fantasy draft or worse find dollar values for auction style leagues knows the difficulty of finding a system that works for their leagues Because leagues vary according to size rules and scoring systems a player who may be a valuable commodity in one league may be below average in another Therefore the one size fits all rankings or valuations that you see most places can be useless And even if those rankings were designed specifically for leagues like yours values and rankings are normally

assigned in a subjective manner without any mathematical evidence to support the author's case. The Winner's Guide to Drafting a Fantasy Football Team has a timeless solution to the problem of finding customized and accurate rankings and dollar values that work for any fantasy league. Author Chris Lee explains what constitutes value and how that value can be translated to rankings and dollar values for any league in a common sense way that removes the guesswork that's at the foundation of most ranking and dollar valuation systems. Simply put, if you know what kind of statistics a player is going to produce in the coming year, you'll know where to draft him or how much to pay for him at your draft. This proven system has helped Chris win many leagues. By following the steps in this book, you can build a spreadsheet that will help you win yours as well.

Predicting a Quarterback's Fantasy Football Point Output

for Daily Fantasy Sports Using Statistical Models Nicholas Aaron King, 2017

In the new age of daily fantasy sports DFS fantasy football has become an enormous revenue generator for DFS sites such as DraftKings and FanDuel. Both companies are valued over 1 billion. However, previous analysis done by popular DFS site Rotogrinders has shown that only the top players are consistently winning the top 10 players much more frequently than the remaining 20,000 players. Using complex statistical models, they're able to identify top athletes and value picks based on an athlete's draft salary that the average player might not be aware of. There is a need to evaluate which methods and algorithms are best at predicting fantasy football point output. These methods could then be applied to future DFS contests outside of football to see if they predict other fantasy sports point output well. There are few resources and little literature available on this subject. Several factors contribute. Daily Fantasy Sports are still relatively new and many people are still just starting to get involved in them. Also, very few people have published their work on their custom models or significant variables since they are generally developing these models for personal use in an attempt to gain an edge in DFS contests and win money. Thus, there is little to no motivation to make their research or methods publicly available. This research will attempt to predict the weekly point output of a quarterback based on a variety of attributes and metrics. Finding the important variables and statistical models and learning how to address the volatility in week-to-week performances for a quarterback will allow us to expand this to other player positions in the future. In addition to understanding the best algorithms to apply to weekly point prediction and the best variables to use to predict a quarterback's output, this research also seeks to answer the question that is currently being debated in courtrooms across the country: should DFS be considered a legal game of skill or a game of luck and therefore online gambling?
