This book is about checking the correctness of programs that can access semantic data. Although the flexibility of semantic data models is one of their greatest strengths, it can lead programmers to accidentally fail to account for unintuitive edge cases leading to run time errors or unintended side effects during program execution. A program may even run for a long time before such an error occurs and the program crashes. Providing a type system is an established methodology for proving the absence of run time errors in programs without requiring execution. The book defines type systems that can detect and avoid such run time errors based on schema languages available for the Semantic Web. Using the Web Ontology Language OWL and its theoretic underpinnings, i.e. description logics and the Shapes Constraint Language SHACL, in particular, the book defines systems that can provide type safe data access to semantic data graphs. The book is divided into 3 parts. Part I contains an introduction and preliminaries. Part II covers type systems for the Semantic Web and Part III includes related work and conclusions.

Teach Yourself VISUALLY MacBook Guy Hart-Davis, 2016-04-25. Previous editions written by Brad Miser.

Computer Science Logic Michael Kaminski, Simone Martini, 2008-09-20. This book constitutes the refereed proceedings of the 22nd International Workshop on Computer Science Logic CSL 2008 held as the 17th Annual Conference of the EACSL in Bertinoro, Italy, in September 2008. The 31 revised full papers presented together with 4 invited lectures were carefully reviewed and selected from 102 submissions. All current aspects of logic in computer science are addressed, ranging from foundational and methodological issues to application issues of practical relevance. The book concludes with a presentation of this year's Ackermann award.

Learn to Program with App Inventor Lyra Logan, 2019-11-26. Learn to build mobile apps for Android devices with MIT App Inventor, a visual drag and drop programming language like Scratch. You've swiped and tapped your way through countless apps, but have you ever created one? Now you can, thanks to *Learn to Program with App Inventor*. In less than an hour, you'll be able to build and run your first app. App Inventor is a free software for making Android apps. All you need is a PC with an Internet connection to build your app and a mobile phone for testing. You'll use a simple drag and drop interface which minimizes errors and avoids too much typing. A certified App Inventor Master Trainer, Logan breaks down each project into logical steps, lists the components you'll need, and then shows you how to create screen designs, control program flow with conditionals and loops, and store data in variables and lists. Once you've tested the app on your phone, you can test what you learned with challenges at the end of each chapter. You'll build cool apps like *Hi World* (Use your voice to send a text message), *Practice Makes Perfect* (Rehearse a speech or dance routine with this video recording app), *Fruit Loot* (Catch randomly falling fruit in this exciting game), *Beat the Bus* (Track a friend's journey using location services and maps), *Virtual Shades* (Take a selfie, then try on some virtual sunglasses). Join the 6 million people who have tried App Inventor and make the journey from app user to app inventor.

Canadian Engineer ,1918 Computer-Aided Reasoning Matt Kaufmann,Panagiotis Manolios,J Strother Moore,2012-12-06 Computer Aided Reasoning An Approach is a textbook introduction to computer aided reasoning It can be used in graduate and upper division undergraduate courses on software engineering or formal methods It is also suitable in conjunction with other books in courses on hardware design discrete mathematics or theory especially courses stressing formalism rigor or mechanized support It is also appropriate for courses on artificial intelligence or automated reasoning and as a reference for business and industry Current hardware and software systems are often very complex and the trend is towards increased complexity Many of these systems are of critical importance therefore making sure that they behave as expected is also of critical importance By modeling computing systems mathematically we obtain models that we can prove behave correctly The complexity of computing systems makes such proofs very long complicated and error prone To further increase confidence in our reasoning we can use a computer program to check our proofs and even to automate some of their construction In this book we present A practical functional programming language closely related to Common Lisp which is used to define functions which can model computing systems and to make assertions about defined functions A formal logic in which defined functions correspond to axioms the logic is first order includes induction and allows us to prove theorems about the functions The computer aided reasoning system ACL2 which includes the programming language the logic and mechanical support for the proof process The ACL2 system has been successfully applied to projects of commercial interest including microprocessor modeling hardware verification microcode verification and software verification This book gives a methodology for modeling computing systems formally and for reasoning about those models with mechanized assistance The practicality of computer aided reasoning is further demonstrated in the companion book Computer Aided Reasoning ACL2 Case Studies Approximately 140 exercises are distributed throughout the book Additional material is freely

available from the ACL2 home page on the Web including solutions to the exercises additional exercises case studies from the companion book research papers and the ACL2 system with detailed documentation **Collected reprints** Atlantic Oceanographic and Meteorological Laboratory,1972 **Principles and Practice of Declarative Programming** ,2006

Types and Programming Languages Benjamin C. Pierce,2002-01-04 A comprehensive introduction to type systems and programming languages A type system is a syntactic method for automatically checking the absence of certain erroneous behaviors by classifying program phrases according to the kinds of values they compute The study of type systems and of programming languages from a type theoretic perspective has important applications in software engineering language design high performance compilers and security This text provides a comprehensive introduction both to type systems in computer science and to the basic theory of programming languages The approach is pragmatic and operational each new concept is motivated by programming examples and the more theoretical sections are driven by the needs of implementations Each chapter is accompanied by numerous exercises and solutions as well as a running implementation available via the Web Dependencies between chapters are explicitly identified allowing readers to choose a variety of paths through the material The core topics include the untyped lambda calculus simple type systems type reconstruction universal and existential polymorphism subtyping bounded quantification recursive types kinds and type operators Extended case studies develop a variety of approaches to modeling the features of object oriented languages *Food-service Facilities* United States. Army. Corps of Engineers,1959 Non-Hausdorff Topology and Domain Theory Jean Goubault-Larrecq,2013-03-28 Introduces the basic concepts of topology with an emphasis on non Hausdorff topology which is crucial for theoretical computer science *Reflections on the Foundations of Mathematics* Wilfried Sieg,Richard Sommer,Carolyn Talcott,2017-03-30 Since their inception the Perspectives in Logic and Lecture Notes in Logic series have published seminal works by leading logicians Many of the original books in the series have been unavailable for years but they are now in print once again This volume the fifteenth publication in the Lecture Notes in Logic series collects papers presented at the symposium Reflections on the Foundations of Mathematics held in celebration of Solomon Feferman s 70th birthday The Feferfest at Stanford University California in 1988 Feferman has shaped the field of foundational research for nearly half a century These papers reflect his broad interests as well as his approach to foundational research which emphasizes the solution of mathematical and philosophical problems There are four sections covering proof theoretic analysis logic and computation applicative and self applicative theories and philosophy of modern mathematical and logic thought *App Inventor 2* David Wolber,Hal Abelson,Ellen Spertus,Liz Looney,2014-10-13 Yes you can create your own apps for Android devices and it s easy to do This extraordinary book introduces you to App Inventor 2 a powerful visual tool that lets anyone build apps Learn App Inventor basics hands on with step by step instructions for building more than a dozen fun projects including a text answering machine app a quiz app and an app for finding your parked car The second half of the

book features an Inventor's Manual to help you understand the fundamentals of app building and computer science App Inventor 2 makes an excellent textbook for beginners and experienced developers alike Use programming blocks to build apps like working on a puzzle Create custom multi media quizzes and study guides Design games and other apps with 2D graphics and animation Make a custom tour of your city school or workplace Control a LEGO MINDSTORMS NXT robot with your phone Build location aware apps by working with your phone's sensors Explore apps that incorporate information from the Web
