Japanese Journal of Physics ,1929 **Learning Expressive Ontologies** J. Völker,IOS Press,2009-06-25 This publication advances the state of the art in ontology learning by presenting a set of novel approaches to the semi automatic acquisition refinement and evaluation of logically complex axiomatizations It has been motivated by the fact that the realization of the semantic web envisioned by Tim Berners Lee is still hampered by the lack of ontological resources while at the same time more and more applications of semantic technologies emerge from fast growing areas such as e business or life sciences Such knowledge intensive applications requiring large scale reasoning over complex domains of interest even more than the semantic web depend on the availability of expressive high quality axiomatizations This knowledge acquisition bottleneck could be overcome by approaches to the automatic or semi automatic construction of ontologies Hence a huge number of ontology learning tools and frameworks have been developed in recent years all of them aiming for the automatic or semi automatic generation of ontologies from various kinds of data However both the quality and the expressivity of ontologies that can be acquired by the current state of the art in ontology learning so far have failed to meet the expectations of people who argue in favor of powerful knowledge intensive applications based on logical inference This work therefore takes a first yet important step towards the semi automatic generation and maintenance of expressive ontologies **The Economics of FinTech** Michael Imerman, Frank J.
