Visual Perception in Children and Adolescents with Visual Impairments Jeff C. Rabin, Corinna M. Bauer, Karen Harpster, Raelyn Ottenbreit, 2025-10-16 Visual perception plays a fundamental role in our understanding of the world around us However for children and adolescents with visual impairments this ability is significantly compromised Understanding the visual perception processes in this population is crucial for their development and overall well being The main goal of this Research Topic is to address the gaps in our understanding of visual perception in children and adolescents with visual impairments We aim to explore the unique challenges they face identify the specific visual processing deficits that may be present and propose innovative approaches to support their visual development By investigating this domain we can enhance our knowledge of how the visual system

adapts and develops in the absence of visual input ultimately leading to improved support and intervention strategies for these individuals *Advanced Methods, Equipment and Platforms in Precision Field Crops Protection, volume II* Jun Ni, Peter Yuen, Jingcheng Zhang, Ning Yang, 2025-11-05 Diseases pests and weeds have severely affected the production of crops Traditional agriculture solves the above problems by large scale chemical spraying but excessive pesticides can also seriously affect the growth of crops and pollute the environment Therefore it is necessary to use modern technologies to protect field crops accurately Collect and analyze the characteristics and location information of diseases pests and weeds as early as possible with equipment and methods and use various platforms to complete the precise protection of field crops This Research Topic welcomes submissions that address precision crop protection research and demonstrate how smart control strategies sensor technology and operational platforms can be integrated into actual crop protection We welcome submissions of original research articles reviews and methods including but not limited to research on the following sub themes 1 Real time monitoring and detection sensors for diseases pests and weeds 2 Intelligent crop protection methods based on artificial intelligence 3 Phenotypic parameter analysis of weeds and affected crops 4 Precision variable rate equipment and system for crop protection 5 Digital twin models novel IoT technologies and cloud platform for crop protection 6 Advances innovations and new trends in modern technologies for crop protection and development

Artificial Intelligence Solutions for Global Health and Disaster Response: Challenges and Opportunities

Tetyana Chumachenko, Plinio Pelegrini Morita, Dmytro Chumachenko, Saman Ghaffarian, 2024-09-02 Artificial intelligence AI has shown promise as an effective tool in disaster preparedness and response providing a unique perspective on some of the most urgent health challenges Rapid advances in AI technology can potentially revolutionize the way how we respond to emergencies and disasters that affect the world's health including early warning systems resource allocation and real time decision making This Research Topic aims to explore the latest developments in AI and its applications in global health and disaster response providing a comprehensive overview of the potential and challenges of AI in improving health outcomes in crises This Research Topic will bring together leading researchers practitioners and policymakers in global health and disaster response to share their experiences and insights on how AI can be leveraged to improve response efforts and enhance healthcare delivery **Romantic Review**, 1925

Remote Sensing Applications in Oceanography with Deep Learning Muhammad Yasir, Shah Nazir, Chao Chen, Weimin Huang, 2025-10-30 Remote sensing technology has revolutionized ocean exploration allowing researchers to monitor and understand various oceanographic processes and phenomena on a global scale Remote sensing which involves the use of satellites and aircraft to collect data about the planet's surface and atmosphere enables scientists to monitor oceanic conditions in real time track changes in sea level and analyse marine ecosystems Deep learning plays a pivotal role in enhancing remote sensing technology revolutionizing how we collect interpret and utilize vast amounts of environmental data By leveraging deep learning remote sensing can identify subtle

patterns and anomalies that traditional methods might miss such as climate change impacts Together remote sensing and ocean exploration enhance our ability to protect marine environments sustain biodiversity and address global challenges like climate change and sustainable development These advancements not only deepen our scientific knowledge but also inform policy decisions and conservation efforts ensuring the health and resilience of the world's oceans for future generations This Research Topic compiles the latest research and developments in the application of remote sensing techniques particularly using deep learning methods to improve our understanding of the oceans We invite original research articles reviews and case studies on the following topics Advanced remote sensing techniques for ocean observation including deep learning based approaches Integration of satellite aerial and in situ data for oceanographic studies using deep learning Machine learning and artificial intelligence algorithms optimized for ocean remote sensing Hyperspectral and multispectral imaging for marine applications enhanced by deep learning techniques SAR Synthetic Aperture Radar applications in oceanography with deep learning models Remote sensing of coastal and estuarine environments using deep learning architectures Monitoring of harmful algal blooms using deep learning algorithms applied to remote sensing data Deep learning based approaches for remote sensing of coral reefs and marine habitats Applications of deep learning in fisheries management utilizing remote sensing data Deep learning based assessment of climate change impacts on oceans using remote sensing datasets Manuscripts relating to practical applications in ecological monitoring and marine target tracking can be submitted to the Research Topic Remote Sensing Applications in Marine Ecology Monitoring and Target Sensing <https://www.frontiersin.org/research-topics/64528-remote-sensing-applications-in-marine-ecology-monitoring-and-target-sensing>

Financial Aid Ai Overview Usa Book Review: Unveiling the Magic of Language

In an electronic digital era where connections and knowledge reign supreme, the enchanting power of language has become much more apparent than ever. Its power to stir emotions, provoke thought, and instigate transformation is truly remarkable.
