Transpecies Design Adrian Parr Zaretsky, Michael Zaretsky, 2024-07-31 In May 2019 the United Nations released the Global Assessment Report on Biodiversity and Ecosystem Services which warned that human activities will drive nearly one million species to extinction in a few decades The primary reasons for this are habitat loss and biodiversity demise caused by changing climate pollution introducing nonindigenous species clearing land over population and consumption Given this situation humans must change course as both human wellbeing and the wellbeing of other than human species are imbricated in one another One way humanity can accomplish the needed transformation is to move beyond an anthropocentric view of life by embracing a transpecies approach that is premised upon interconnected flourishing Transpecies design as outlined in this book offers a new approach to regenerating the natural environment while honoring biodiversity Rather than presenting the human experience as the goal of design transpecies design takes the inextricable linkages connecting living things as both its starting point and end goal As such it moves beyond human experience serving as the fundamental ingredient for making better design processes and decisions This book is essential reading for artists designers and architects as well as students of architecture landscape architecture interior architecture art product design urban design planning environmental philosophy and cultural studies *Life in the Market Ecosystem* Stuart K.
