Sustainability in Fashion and Textiles Miguel Angel Gardetti,Ana Laura Torres,2017-09-08 There is no doubt that the textile industry the production of clothing fabrics thread fibre and related products plays a significant part in the global economy It also frequently operates with disregard to its environmental and social impacts The textile industry uses large quantities of water and outputs large quantities of waste As for social aspects many unskilled jobs have disappeared in regions that rely heavily on these industries Another serious and still unresolved problem is the flexibility textile industry companies claim to need Faced with fierce international competition they are increasingly unable to offer job security This is without even considering the informal sector work proliferating both in developing and developed countries Child labour persists within this sector despite growing pressure to halt it Fashion demands continuous consumption In seeking to own the latest trends consumers quickly come to regard their existing garments as inferior if not useless Old items become unwanted as quickly as new ones come into demand This tendency towards disposability results in the increased use of resources and thus the accelerated accumulation of waste It is obvious to many that current fashion industry practices are in direct competition with sustainability objectives yet this is frequently overlooked as a pressing concern It is however becoming apparent that there are social and ecological consequences to the current operation of the fashion industry sustainability in the sector has been gaining attention in recent years from those who believe that it should be held accountable for the pressure it places on the individual as well as its contribution to increases in consumption and waste disposal This book takes a wide screen approach to the topic covering among other issues sustainability and business management in textile and fashion companies value chain management use of materials sustainable production processes fashion needs and consumption disposal and innovation and design The book will be essential reading for researchers and practitioners in the global fashion business

Textile-led Design for the Active Ageing

Population Jane McCann, David Bryson, 2014-08-19 Despite the world's aging population suitable clothing for the older community is a largely neglected area. This book considers the needs of the growing number of active older people and investigates how recent developments in textiles, fibres, finishes, design and integrated technology can be deployed to serve this group and improve quality of life. Part I provides an understanding of the active aging population by considering the group's experiences of and attitudes towards clothing and reviewing the barriers to their adoption of new wearable technologies. Part II focuses on the needs of the older population including effective communication with designers and the age-related anatomical and physiological changes that designs should consider. Part III reviews design requirements and processes and finally Part IV reviews the manufacture of suitable apparel with chapters on suitable textile fibres, balancing technology and aesthetics and wearable electronics. Summarises the wealth of recent research on attitudes to clothing amongst the active ageing population. Looks into how their aspirations can be investigated and appropriate apparel designed to meet their needs. Examines design and manufacturing issues including ways of accommodating physiological changes with age and the use of wearable electronics.

Folk Fashion Amy Twigger Holroyd, 2017-05-23 A dynamic resurgence in sewing and knitting is under way with many people enjoying making and mending their own garments at home. However, stories abound of homemade clothes languishing at the back of the wardrobe. Amy Twigger Holroyd draws on ideas of fashion culture and craft to explore makers' lived experiences of creating and wearing homemade clothes in a society dominated by shop-bought garments. Using the innovative metaphor of fashion as common land, *Folk Fashion* investigates the complex relationship between making, well-being and sustainability. Twigger Holroyd combines her own experience as a designer and knitter with first-hand accounts from folk fashion makers to explore this fascinating yet under-examined area of contemporary fashion culture. Looking to the future, she also considers how sewers and knitters might maximise the radical potential of their activities.
