Indigenous Currencies Ashley Cordes, 2025-04-22 How Indigenous currencies including wampum and dentalium shells beads and the cryptocurrency MazaCoin have long constituted a form of resistance to settler colonialism Indigenous Currencies follows dynamic stories of currency as a meaning making communication technology Settler economies regard currency as their own invention casting Indigenous systems of value exchange and data stewardship as incompatible with contemporary markets In this book Ashley Cordes refutes such claims and describes a long history of Indigenous innovation

in currencies including wampum dentalium beads and more recently the cryptocurrency MazaCoin By looking closely at how currencies developed over time through intercultural communication Cordes argues that Indigenous currencies transcend the scope of economic value revealing the cultural social and political context of what it means to exchange The book's two main case studies the gold rush and the code rush frame a deep dive into how Indigenous ways of being have shaped the use and significance of currency and vice versa Settler currencies which have developed in the wake of wars and through massively scaled forms of material extraction offer a very different story of the place of currencies within settler economies of dispossession The second part of the study asks how contemporary cryptocurrencies may play a critical role in cultivating Tribal sovereignty The author analyzes structural properties of the polymorphic blockchain to provide key insights into how emergent digital spaces with their attendant forms of meaning and value represented by code NFTs and Web 3.0 are inextricably connected to Indigenous knowledges The book cultivates a vision of currency in which the principle of leaving some for the rest establishes a way of imagining relationships of exchange beyond their enclosure within settler capitalist parameters of extraction and into currents of deep reciprocity

the reverse is not true Cryptocurrencies are managed by a computer algorithm while digital currencies are backed by an authority Now digital currencies exhibit properties like other currencies but do not have a physical form like that of banknotes and coins You can receive transfer and or exchange digital currency for another currency For example it can be used to pay for goods and services in an online store Cryptocurrencies like Bitcoin and Ethereum are pieces of computer code that are not managed by any authority Creation as well as use is maintained through a distributed ledger typically a blockchain that serves as a public financial transaction database So cryptocurrencies typically use decentralized control where there is no presence of a third party to have authority over the investor One of the most significant differences between digital currency and cryptocurrency is the underlying technology Digital currency is a digital format of fiat money whereas cryptocurrencies are built on the blockchain Cryptocurrencies are not under the control of any single entity Digital currency however is under the direct control of the central bank When it comes to digital currency the issuing authority is of prime importance
