Advances in Postharvest Technologies of Vegetable Crops Bijendra Singh, Sudhir Singh, 2018-05-24. This book presents a selection of innovative postharvest management practices for vegetables. It covers technologies in harvesting, handling and storage of vegetables including strategies for low temperature storage of vegetables, active and smart packaging of vegetables, edible coatings, application of nanotechnology in postharvest technology of vegetable crops and more. It considers most of the important areas of vegetable processing while maintaining nutritional quality and addressing safety issues. Fruits and vegetables are important sources of nutrients such as vitamins, minerals and bioactive compounds which provide many health benefits. However, due to poor postharvest management such as non availability of cold chain management and low cost processing facilities, large quantities of vegetables perish before they reach the consumer. Furthermore, higher temperatures in some regions also contribute to an increased level of postharvest losses. With chapters written by experts in the postharvest handling of vegetable, this volume addresses these challenges. It is devoted to presenting both new and innovative technologies as well as advancements in traditional technologies.

Quality Handling and Evaluation Ramdane Dris,S. Mohan Jain,2007-05-08 Food quality is becoming an ever increasing important feature for consumers and it is well known that some food crops are perishable and have a very short shelf and storage life An effective quality assurance system throughout the handling steps between harvest and retail display is essential to provide a consistently good quality supply of fresh food crops to the consumers and to protect the reputation of a given marketing label Food manufacturing companies all over the world are increasingly focussing on quality aspect of food including minimally processed food to meet consumer demands for fresh like and healthy food products To investigate and control quality one must be able to measure quality related attributes Quality of produce encompasses sensory attributes nutritive values chemical constituents mechanical properties functional properties and defects Successful postharvest handling of crops requires careful coordination and integration of the various steps from harvest operations to consumer level in order to maintain the initial product quality Maturity at harvest is one feature of quality of perishable products it has great influence on their postharvest behavior during marketing Safety assurance can be part of quality assurance and its focus on minimizing chemical and microbial contamination during production harvesting and postharvest handling of intact and fresh cut of commodities Essentially electromagnetic often optical properties relate to appearance mechanical properties to texture and chemical properties to flavor taste and aroma *Recent Advances in Postharvest Technologies, Volume 2* Nouredine Benkeblia,2024-09-10 The elapsing time from producer to consumer has significantly increased as a result of food marketing and trade globalization Consequently maintaining quality along the food value chain is becoming a significant challenge Postharvest losses are considered a major component of food loss and waste in the supply chain from farmers to consumers due to improper handling storage transport preservation techniques and spoilage Postharvest science aims to extend the shelf life of fresh and perishable commodities and to reduce heavy losses thereby contributing to food security While significant progresses have been made in postharvest preservation and shelf life extension the continuous development of emerging technologies have changed our vision on postharvest science Furthermore recent advancements in molecular

engineering of horticultural crops for quality improvement the development of genomics transcriptomics proteomics and metabolomics have led to a better understanding of the physiology and the biochemistry of the senescence processes resulting in better preservation and improved production of fresh crops This two volume work focuses on innovative technologies that extend and preserve shelf life of fruits and vegetables Volume 1 offers a review on the state of the art modern technologies in the postharvest field The accompanying Volume 2 explores advanced and novel technologies after harvest particularly the application of nanotechnologies to packaging materials

Production Practices and Quality Assessment of Food Crops Ramdane Dris, S. Mohan Jain, 2007-05-08 We can not talk about commodity production without building up all the operations after harvest It is possible to market the products just after harvest but it is only possible in small quantities Postharvest handling is the ultimate stage in the process of producing quality fresh fruits and vegetables getting these unique packages of water fresh commodities to the supper table Fresh fruits and vegetables are susceptible to a number of

postharvest disease and disorders and the postharvest operations are predominately aimed at maintaining harvest quality. Every step in the handling chain can influence the extent of disease and quality of the stored product. From planting to consumption, there are many opportunities for bacteria, viruses, and parasites to contaminate produce or nutrient deficiency level causing physiological disorders. Most of the storage rots are diseases that have originated in the field and have carried over onto commodities after harvest. Physiological disorders also arise from poor handling between harvest, storage, and marketing. Treatments have a direct effect on inactivating or outright killing germinating spores, thus minimising rots. Prestorage treatment appears to be a promising method of postharvest control of decay. Pre or postharvest treatments of commodities are considered as potential alternatives for reducing the incidence of diseases, disorders, desinfestation of quarantine pests, and for preserving food quality. Postharvest treatments lead to an alteration of gene expression and fruit ripening can sometimes be either delayed or disrupted.
