Next Generation Data Technologies for Collective Computational Intelligence Nik Bessis, Fatos Xhafa, 2011-04-28 This book focuses on next generation data technologies in support of collective and computational intelligence. The book brings various next generation data technologies together to capture, integrate, analyze, mine, annotate, and visualize distributed data made available from various community users in a meaningful and collaborative for the organization manner. A unique perspective on collective computational intelligence is offered by embracing both theory and strategies fundamentals such as data clustering, graph partitioning, collaborative decision making, self adaptive ant colony swarm and evolutionary agents. It also covers emerging and next generation technologies in support of collective computational intelligence such as Web 2.0, social networks, semantic web for data annotation, knowledge representation and inference, data privacy and security and enabling distributed and collaborative paradigms such as P2P, Grid and Cloud Computing due to the geographically dispersed and distributed nature of the data. The book aims to cover in a comprehensive manner the combinatorial effort of utilizing and integrating various next generations collaborative and distributed data technologies for computational intelligence in various scenarios. [Graphics Software Tools](#) Jim X. Chen, 2007-08-23 Many scientists in different disciplines realize the power of graphics but are also bewildered by the complex implementations of a graphics system and numerous graphics tools. More often than not they choose the wrong software tools and end up with unsatisfactory results. Hopefully if we know how a graphics system works and what basic functions many graphics tools provide we can understand and employ some graphics tools without spending much precious time on learning all the details that may not be applicable and we can become graphics experts through such a shortcut. *Overview* This book aims to be a shortcut to graphics theory, programming tools and applications. It covers all graphics basics and several advanced topics without including some implementation details that are not necessary in graphics applications. It categorizes current graphics tools according to their applications and provides many weblinks to important resources on the Internet. The purpose is to provide an exhaustive list of graphics tools with their major applications and functions. The reference list may contain some inaccuracies since new tools are constantly emerging. *VI Preface* and old tools become obsolete. Through explaining and categorizing these graphics tools and their primary applications we hope to provide learners and researchers with different means and application areas in computer graphics and help them understand and use visualization, modeling, animation, simulation, virtual reality and many online resources.

DIY Media Michele Knobel, Colin Lankshear, 2010 Schools remain notorious for co-opting digital technologies to business as usual approaches to teaching new literacies. *DIY Media* addresses this issue head on and describes expansive and creative practices of digital literacy that are increasingly influential and popular in contexts beyond the school and whose educational

potential is not yet being tapped to any significant degree in classrooms This book is very much concerned with engaging students in do it yourself digitally mediated meaning making practices As such it is organized around three broad areas of digital media moving media still media and audio media Specific DIY media practices addressed in the chapters include machinima anime music videos digital photography podcasting and music remixing Each chapter opens with an overview of a specific DIY media practice includes a practical how to tutorial section and closes with suggested applications for classroom settings This collection will appeal not only to educators but to anyone invested in better understanding and perhaps participating in the significant shift towards everyday people producing their own digital media
