Book Basics Marine Estuarine Ecology Abhijit:

Basics of Marine and Estuarine Ecology Abhijit Mitra, Sufia Zaman, 2016-02-02 The book presents recent research on marine ecology in different parts of the world. It aims to shed light on relevant topics for budding marine ecologists. The blue soup of Planet Earth, which comprises both biotic and abiotic components, is essential to keeping the wheel of civilization running. Four major ecosystem service categories have been identified within this context: namely provisioning services such as water, food, mangrove timber, honey, fish, wax, fuel, wood, fodder, and bioactive compounds from marine and estuarine flora and fauna; regulating services such as the regulation of climate, coastal erosion, coral bleaching, and pollution; cultural services encompassing recreational tourism, spiritual, and other non-material benefits; and supporting services such as nutrient cycling and photosynthesis. These valuable services are obtained from various resources that must be conserved for the sake of humanity. This book presents data for each resource type not just in the form of a simple description but also through case studies that resulted from several research projects and pilot programs carried out in different parts of the world. Statistical tools were also used to critically analyze the influence of relevant hydrological parameters on the biotic community. Advanced research in marine and estuarine ecology is based on the use of sophisticated instruments, sampling, precision, statistical tools, etc., which have also been highlighted in the book.

Blue Economy in Indian Sundarbans Abhijit Mitra, Sufia Zaman, Prosenjit Pramanick, 2022-08-28 This book provides a cross-sectoral multidisciplinary assessment of the major verticals of Blue Economy relevant to the mangrove ecosystem in Indian Sundarbans, which is a deltaic complex at the apex of Bay of Bengal. This book evaluates the feasibility of Blue Economy considering the natural resource base in this mangrove-dominated deltaic complex. Chapter 1 discusses the need of expanding different marine and estuarine-oriented verticals of Blue Economy as the land resources are gradually becoming depleted. Chapter 2 highlights the wide spectrum of biotic and abiotic resources of the Indian Sundarbans, which can serve as the strong foundation of expanding Blue Economy in the region. Chapter 3 highlights several mangrove-based livelihoods that are not only innovative but may present new opportunities to initiate cottage industries. Chapter 4 highlights the threats associated with Blue Economy in Indian Sundarbans, like sea level rise, acidification of water, weather extremes, pollution, over-exploitation of natural resources, etc., along with ground zero environmental data collated over three decades. Chapter 5 offers several solutions to combat the threats to regional Blue Economy, emphasizing both technology and policy-based management. The book attempts to align the proliferation of different sectors of Blue Economy in the framework of Indian Sundarbans.

Mangrove Carbon Trading in the Lower Gangetic Delta Abhijit Mitra, Sufia Zaman, Prosenjit Pramanick, Sana Ahmed, 2024-12-14 True mangrove flora and their associates in the lower Gangetic region are noted for their wide spectrum of ecosystem services, in which carbon storage and sequestration by the forest is one of the most important components. Many researchers are updating the carbon repository of the lower Gangetic delta mangroves with the aim to ascertain their role to reduce the carbon dioxide level of

the near surface atmosphere However due to difficulty in assessment marketing and lack of clarity over ownership of natural resources the mangrove based carbon trading system has not yet crystallized There is an estimated 13 76 Mha of mangrove forests world wide approximately 20% 2 6 Mha of which is potentially investible for carbon finance projects based on the probability of imminent threat The magnitude and the variability of threats to which the mangroves of the lower Gangetic delta are exposed to have made the trading process more complicated In addition gaps also exist between the national government policy and the trading of the blue carbon projects which has kept the future of such projects remain on hold The authors put forward the views that the creation of more financial facilities for restoration and expansion of blue carbon preferably mangroves with the involvement of the local communities can provide the initial capital involved in developing mangrove based carbon projects This includes the costs of conducting feasibility studies implementing capacity building programs monitoring the health of the mangrove plantation restoration on regular basis and creating mangrove based alternative livelihood programs that will support island dwellers of the region in order to accelerate the magnitude of mangrove based carbon projects leading to growth of the mangrove trading market Estuarine Ecology Byron C.

Dunton,2022-11-15 Estuarine Ecology A detailed and accessible exploration of the fundamentals and the latest advances in estuarine ecology In the newly revised third edition of Estuarine Ecology a team of distinguished ecologists presents the current knowledge in estuarine ecology with particular emphasis on recent trends and advances The book is accessible to undergraduate students while also providing a welcome summary of up to date content for a more advanced readership This latest edition is optimized for classroom use with a more intuitive mode of presentation that takes into account feedback from the previous edition s readers Review questions and exercises have been added to assist in the learning and retention of complex concepts Estuarine Ecology remains the gold standard for the discipline by taking stock of the manifold scientific breakthroughs made in the field since the last edition was written It also offers Thorough introductions to estuarine geomorphology circulation and chemistry In depth treatments of estuarine primary and secondary production including coastal marshes and mangrove wetlands A holistic view of estuarine ecosystems their modeling and analysis as well as the impact of human activities and climate change A companion website with detailed answers to exercise questions Perfect for students of estuarine ecology environmental science fisheries science oceanography and natural resource management Estuarine Ecology will also earn a place in the libraries of professionals government employees and consultants working on estuary and wetlands management and conservation **Estuarine**

Pollution in the Lower Gangetic Delta Abhijit Mitra,2019-09-05 This book critically analyzes the water quality in the lower Gangetic delta and examines the environmental conditions and physical processes operating in this rich ecosystem Readers with an interest in environmental science geography oceanography marine biology environmental biology aquatic pollution and ecology will find the research presented here most appealing Readers will discover critical aspects of the

chemistry of the estuarine water particularly that of Hooghly and Matla estuaries in the lower stretch of the delta region along with the causes and effects of pollution in and around this region Particular attention is given to the bioaccumulation of conservative pollutants in edible fishes and floral communities thriving in this region Several case studies are also incorporated to highlight the vulnerability of pollution in this region Chapters also address the impacts of climate change specifically acidification on the concentration and behavior of conservative pollutants Finally the book highlights some mitigation measures at the technology and policy level to minimize the negative impacts posed by different groups of pollutants on the estuarine biodiversity Practical Marine and Estuarine Ecology Wageningen University Aquatic Ecology and Water Quality Management Group,2011 *Estuarine Acidification* Abhijit Mitra,Sufia Zaman,2021-08-24 This book provides a cross sectoral multi disciplinary assessment of different problems associated with estuarine acidification with special thrust on mangrove dominated Indian Sundarban estuaries The arms of ocean acidification have extended to coastal and estuarine waters where a wide spectrum of biodiversity thrives with unique adaptation extending several ecosystem services Impact of acidification in these areas is a matter of concern as acidification potentially has more immediate effects on the health of estuaries and inshore regions as well as regional economies Ground zero data collected for more than three decades have made the book stand on a strong base **Introduction Marine and Estuarine Ecology** R. The Estuarine Ecosystem Donald S. McLusky,Michael Elliott,2004-04-29 For the inhabitants of many of the world s major towns and cities estuaries provide their first and nearest glimpse of a natural habitat Despite the attempts of man to pollute or reclaim it the estuarine ecosystem continues to provide a fascinating insight into a natural world where energy is transformed from sunlight into plant material and then through the steps of a food chain is converted into a rich food supply for birds and fish The book provides a concise readable introduction to estuarine ecology First published in 1981 it soon established itself as the principle textbook of choice in the UK NW Europe This new edition builds upon the strengths of the earlier editions but has been thoroughly revised throughout The new co author brings a human impact dimension to the revised book It is written for advanced undergraduate and graduate students particularly taught masters who have had a general ecology course but no further training in estuarine science It will be useful to both professional researchers and practical managers in marine ecology and environmental science who seek a compact but comprehensive introduction to estuarine ecology *Estuarine Ecology* John W.
