Essential Radiology for Sports Medicine Philip Robinson, 2010-06-21 Imaging plays an increasingly vital role in the management of athletes aiding diagnosis injury grading and prognosis as well as guiding therapy These processes apply equally to elite and recreational athletes young and old I have always found that understanding the relevance of imaging findings is easier when accompanied by knowledge of the anatomy biomechanics and pathological processes involved in injury formation This textbook has been developed with both radiologists and sports clinicians in mind and aims to bring all these processes together and illustrate the spectrum of injury and associated clinical features for specific anatomical areas Internationally recognized musculoskeletal experts have contributed chapters which provide an imaging and clinical overview of the most relevant joint bone and soft tissue athletic injuries There is guidance for the reader on why specific injuries occur how to identify the optimal imaging evaluation and how to interpret the subsequent imaging findings Acute and overuse injuries are discussed as well as the premature degenerative processes that occur in athletes State of the art imaging techniques and findings are presented including the use of musculoskeletal ultrasound conventional MR imaging and MR arthrography Therapeutic image guided intervention using fluoroscopy CT and ultrasound is also discussed This balance of techniques should allow a clinician whose practice focuses on one particular modality to become aware not only of that technique's abilities but other modalities and their capabilities and limitations Leeds UK Philip Robinson vii Contents 1 Knee Injuries 1 Melanie A Hopper and Andrew J

Sports Medicine Imaging Michael J. Tuite, 2010 Musculoskeletal injuries are an unfortunate byproduct of an active population Therefore imaging of these injuries is essential for the treatment rehabilitation and return to play This issue reviews topics such as pediatric upper and lower extremity injuries skiing and snow boarding injuries overhead throwing injuries spine injuries and hip injuries
