Decker, Gary Hall, Nick Heaton, Yaron Kashai, Neyaz Khan, Zeev Kirshenbaum, Efrat Shneydor, 2011-09-30. The Accellera Universal Verification Methodology (UVM) standard is architected to scale, but verification is growing and in more than just the digital design dimension. It is growing in the SoC dimension to include low power and mixed signal and the system integration dimension to include multi language support and acceleration. These items and others all contribute to the quality of the SOC, so the Metric Driven Verification (MDV) methodology is needed to unify it all into a coherent verification plan. This book is for verification engineers and managers familiar with the UVM and the benefits it brings to digital verification but

who also need to tackle specialized tasks It is also written for the SoC project manager that is tasked with building an efficient worldwide team While the task continues to become more complex Advanced Verification Topics describes methodologies outside of the Accellera UVM standard but that build on it to provide a way for SoC teams to stay productive and profitable
