perceptual mechanisms the research on shape becomes coherent and experimental findings no longer seem to contradict each other A single theory of shape perception is thus possible and Pizlo offers a theoretical treatment that explains how a three dimensional shape percept is produced from a two dimensional retinal image assuming only that the image has been organized into two dimensional shapes Pizlo focuses on discussion of the main concepts telling the story of shape without interruption Appendixes provide the basic mathematical and computational information necessary for a technical understanding of the argument References point the way to more in depth reading in geometry and computational vision
