Communication Arts, 2002 *Urban Forests, Trees, and Greenspace* L. Anders Sandberg, Adrina Bardekjian, Sadia Butt, 2014-07-25 Urban forests trees and greenspace are critical in contemporary planning

and development of the city Their study is not only a question of the growth and conservation of green spaces but also has social cultural and psychological dimensions This book brings a perspective of political ecology to the complexities of urban trees and forests through three themes human agency in urban forests and greenspace arboreal and greenspace agency in the urban landscape and actions and interventions in the urban forest Contributors include leading authorities from North America and Europe from a range of disciplines including forestry ecology geography landscape design municipal planning environmental policy and environmental history Resources in Education ,1991 Bioeconomy for Beginners Joachim Pietzsch,2020-03-06 This book provides an interdisciplinary and comprehensible introduction to bioeconomy It thus provides basic knowledge for understanding a transformation process that will shape the 21st century and requires the integration of many disciplines and industries that have had little to do with each other up to now We are talking about the gradual and necessary transition from the age of fossil fuels which began around 200 years ago to a global economy based on renewable raw materials and renewable energies The success of this transition is key to coping with the challenge of climate change This book conceives the realization of bioeconomy as a threefold task a scientific an economic and an ecological one Where does the biomass come from that we need primarily for feeding the growing world population but also for future energy and material use How can it be processed in biorefineries and what role does biotechnology play in this regard Which aspects of innovation economics need to be considered which economic aspects of value creation competitiveness and customer acceptance are important What conditions must a bioeconomy fulfil in order to enable a sustainable development of life on earth May it be regarded as a key to further economic growth or shouldn t it rather orient itself towards the ideal of sufficiency By dealing with these questions from the not necessarily consistent perspectives of proven experts this book provides an interdisciplinary overview of a dynamic field of research and practice that raises more questions than answers and thus may nurture the motivation of many more people to seriously engage for the realization of a bioeconomy
