Black Enterprise ,2000-06 BLACK ENTERPRISE is the ultimate source for wealth creation for African American professionals entrepreneurs and corporate executives Every month BLACK ENTERPRISE delivers timely useful information on careers small business and personal finance

Artificial Intelligence for Computer Games Pedro Antonio González-Calero,Marco Antonio Gómez-Martín,2011-03-01 The book presents some of the most relevant results from academia in the area of Artificial Intelligence for games It emphasizes well theoretically supported work supported by developed prototypes which should lead into integration of academic AI techniques into current electronic entertainment games The book elaborates on the main results produced in Academia within the last 10 years regarding all aspects of Artificial Intelligence for games including pathfinding decision making and learning A general theme of the book is the coverage of techniques for facilitating the construction of flexible not prescribed AI for agents in games Regarding pathfinding the book includes new techniques for implementing real time search methods that improve the results obtained through AI as well as techniques for learning pathfinding behavior by observing actual players Regarding decision making the book describes new techniques for authoring tools that facilitate the construction by game designers typically nonprogrammers of behavior controlling software by reusing patterns or actual cases of past behavior Additionally the book will cover a number of approaches proposed for extending the essentially pre scripted nature of current commercial videogames AI into a more interactive form of narrative where the story emerges from the interaction with the player Some of those approaches rely on a layered architecture for the character AI including beliefs intentions and emotions taking ideas from research on agent systems The book also includes chapters on techniques for automatically or semiautomatically learning complex behavior from recorded traces of human or automatic players using different combinations of reinforcement learning case based reasoning neural networks and genetic algorithms

General Video Game Artificial Intelligence Diego Perez Liebana,Simon M. Lucas,Ahmed Khalifa,Raluca D. Gaina,2019-10-09 Research on general video game playing aims at designing agents or content generators that can perform well in multiple video games possibly without knowing the game in advance and with little to no specific domain knowledge The general video game AI framework and competition propose a challenge in which researchers can test their favorite AI methods with a potentially infinite number of games created using the Video Game Description Language The open source framework has been used since 2014 for running a challenge Competitors around the globe submit their best approaches that aim to generalize well across games Additionally the framework has been used in AI modules by many higher education institutions as assignments or as proposed projects for final year undergraduate and Master s students and Ph D candidates The present book written by the developers and organizers of the framework presents the most interesting highlights of the research performed by the authors during these years in this domain It showcases work on methods to play the games generators of content and video

game optimization It also outlines potential further work in an area that offers multiple research directions for the future
