as long as fifteen years or even in the case of peonies a lifetime Bloom time may last for only two weeks each year or may extend over two or three months Some perennials such as primroses require deep humusy soil and plenty of shade while others such as thread leaf coreopsis and cushion spurge wither away unless they grow in well drained soil and full sun Some perennials contain themselves in a nice neat mound while others such as gooseneck loosestrife will take over your entire garden Some species should be cut back in midsummer while others such as hybrid lilies may die if you remove their foliage There are so many different species and cultivars of perennial flowers to choose from that few people ever become completely familiar with all the options For the perennial gardener books are an invaluable resource They provide photographs for identification and inspiration cultural information a description of growth habits bloom time color and characteristics of special cultivars Invest in a good how to book that has cultural information and a color encyclopedia to help you identify plants and plan your selections Fellow gardeners are another great source of information about perennials They can give you firsthand details about bloom time height hardiness and cultural requirements and if you visit their gardens you can also see for yourself what the plants really look like up close Nothing beats seeing a plant in a garden setting where you can observe how it is being used You may even go home with some pass along plants for your own garden There s just no way to know how a plant will do for you unless you give it a try If it turns out to be too tall the color is wrong or the plant doesn t thrive you can always move it and try something different
