Linear Vs. Undulating Periodized Strength Training in Previously Resistance Trained Males

Timothy Moore, 2016 Background Periodization is a long term approach for resistance training that involves pre planned systematic variations in training specificity intensity and volume organized into periods within an overall training program This approach has been shown to be a proven method to maximize benefits of the program however the most effective form of periodization is still being debated Purpose The purpose of this review was to systematically identify and analyze previous studies that have directly compared Linear Periodization LP and Undulating Periodization UP resistance training programs in men with previous resistance training experience Methods A systematic search of Concordia University's library database Summons SPORTDiscus MEDLINE PubMed and The Journal of Strength and Conditioning online database resulted in 1 894 citations After the initial search those publications included were then limited to studies from a peer reviewed journal with a link to full text In addition all studies needed to satisfy the inclusion criteria which resulted in nine total publications being included in this review Of the nine included studies six were Randomized Control Trials RTC's and three were Quasi Experimental Results The results of this review demonstrate that both LP and UP resistance training programs can increase muscular strength considerably but no definitive evidence favoring LP or UP was found Conclusions Based on this systematic review strength and conditioning professionals can feel confident that incorporating either form of periodization into an athlete's training program can help maximize training effects
