García, Robert M.J. Deacon, Patricia Cogram, 2018-06-21 Neurodegenerative diseases are the most frequent cause of dementia, representing a burden for public health systems, especially in middle and middle high income countries. Although most research on this issue is concentrated in first world centers, growing efforts in South America are affording important breakthroughs. This emerging agenda poses new challenges for the region but also new opportunities for the field. This book aims to integrate the community of experts across the globe and the region and to establish new challenges and developments for future investigation. We present research focused on neurodegenerative research in South America. We introduce studies assessing the interplay among genetic, neural and behavioral dimensions of these diseases, as well as articles on vulnerability factors, comparisons of findings from various countries and works promoting multicenter and collaborative networking. More generally, our book covers a broad scope of human research approaches: behavioral assessment, neuroimaging, electromagnetic techniques, brain connectivity, peripheral measures, animal methodologies, genetics.

Safe Utilization of Heavy Metals Pollution in Soils for Healthy Food Jiawen Wu, Qi Tao, Muhammad Bilal

Khan, 2024-11-25 Arable lands which provide about 95% of food for human beings are under great pressure due to soil pollution More than five million sites of soils worldwide are contaminated with heavy metals including cadmium Cd lead Pb mercury Hg chromium Cr arsenic As zinc Zn and copper Cu etc Heavy metals can occur naturally in soils or as a result of anthropogenic activities During the last few decades rapid industrial development air deposition polluted water irrigation sewage sludge application overuse of pesticides and inorganic fertilizers application result in the deposition of heavy metals in the global soil system On the one hand these toxic heavy metals in soils disturb photosynthesis respiration transpiration and other metabolic processes in plants resulting in retardation of plant growth or reduced yields of crops On the other hand heavy metals enter human body via food chain which leads to kidney diseases liver diseases central nervous system disorders and insomnia Therefore there is an urgent need to develop strategies for the safe utilization of heavy metals polluted soils To produce safe crops the high levels of heavy metals polluted soils are preferred to be decontaminated whereas the low levels of heavy metals polluted soils are considered to be continuously used for crop production In this regard enhanced removal rates of heavy metals from soils by phytoremediation plants are needed while decreased heavy metals accumulation in crops below safe food standards is required However environmentally friendly cost effective efficient and sustainable strategies for promoting phytoremediation efficiency of heavy metals polluted soils or repressing toxic heavy metals accumulation in edible organs of crops are still limited Thus this research topic will highlight recent developments current knowledge and perspectives on phytoremediation or mitigation of heavy metal stress in plants and plants interact with chemical or and biological strategies for the safe utilization of heavy metal s polluted soils
