Business GPU Based Scattered Data Modeling Saranya S. Vinjarapu, 2012

Unevenly distributed scattered data makes it difficult to be visualized throughout the volume of interest. For this type of data, a two-step approach is usually employed. The first step involves the use of interpolation methods to model the sample data onto an intermediate uniform grid, and the second step renders the intermediate grid to form the images of the visualization. A 3D grid with a reasonable resolution consists of tens of thousands of grid nodes, which makes the modeling process time consuming. The aim of this project is to design and implement a GPU-based system to speed up the modeling process. Following the CUDA GPU programming model, an interpolation-based scattered data modeling system has been designed and implemented. Tests have been conducted with real-world data. On an average, GPU performed 43 times faster than CPU for the test cases. The highest speed up is observed on an NVIDIA GTX 470 where the GPU performed 360 times faster than its CPU counterpart for a grid size of 128x128x128. Experiments have also been designed and performed to validate the system's stability.

GPU Parallel Computing for Machine Learning in Python Yoshiyasu Takefuji,2017-06-17 This book illustrates how to build a GPU parallel computer If you don t want to waste your time for building you can buy a built in GPU desktop laptop machine All you need to do is to install GPU enabled software for parallel computing Imagine that we are in the midst of a parallel computing era The GPU parallel computer is suitable for machine learning deep neural network learning For example GeForce GTX1080 Ti is a GPU board with 3584 CUDA cores Using the GeForce GTX1080 Ti the performance is roughly 20 times faster than that of an INTEL i7 quad core CPU We have benchmarked the MNIST hand written digits recognition problem 60 000 persons hand written digits from 0 to 9 The result of MNIST benchmark for

machine learning shows that GPU of a single GeForce GTX1080 Ti board takes only less than 48 seconds while the INTEL i7 quad core CPU requires 15 minutes and 42 seconds A CUDA core is most commonly referring to the single precision floating point units in an SM streaming multiprocessor A CUDA core can initiate one single precision floating point instruction per clock cycle CUDA is a parallel computing platform and application programming interface API model created by Nvidia It allows software developers and software engineers to use a CUDA enabled graphics processing unit GPU for general purpose processing The GPU parallel computer is based on SIMD single instruction multiple data computing The first GPU for neural networks was used by Kyoung Su Oh et al for image processing published in 2004 1 A minimum GPU parallel computer is composed of a CPU board and a GPU board This book contains the important issue on which CPU GPU board you should buy and also illustrates how to integrate them in a single box by considering the heat problem The power consumption of GPU is so large that we should take care of the temperature and heat from the GPU board in the single box Our goal is to have the faster parallel computer with lower power dissipation Software installation is another critical issue for machine learning in Python Two operating system examples including Ubuntu16 04 and Windows 10 system will be described This book shows how to install CUDA and cudnnlib in two operating systems Three frameworks including pytorch keras and chainer for machine learning on CUDA and cudnnlib will be introduced Matching problems between operating system Ubuntu Windows 10 library CUDA cudnnlib and machine learning framework pytorch keras chainer are discussed The paper entitled GPU and open source software play a key role for advancing deep learning was published in Science eLetter July 20 2017 <http://science.sciencemag.org/content/357/6346/16> tab e letters
