, Renato de Filippis, 2024-06-21 The COVID 19 outbreak has impacted many areas of our lives including mental health Lockdown and physical distancing measures have been one major effective intervention to counter the spread of the virus and reduce the impact of the disease However they have negatively impacted mental well being and behaviors either triggering the onset of new psychiatric symptoms and diseases or amplifying pre existing ones The pandemic and lockdown measures have also been associated with reduced access to treatment and facilities all over the world further worsening mental health outcomes The impact on mental health although universal varied between nations Cultural and societal variables including norms values religion and stigma have played an important role in shaping COVID 19 related mental health symptoms including anxiety depression grief psychosis and addiction These sociocultural factors have also molded how mental health interventions are tailored and provided Highlighting the intertwining relationship between the pandemic mental health and sociocultural factors are essential to managing emerging mental health symptoms adequately **Mental**

Illness, Culture, and Society: Dealing With the COVID-19 Pandemic Mohammadreza Shalbafan, Renato de Filippis, Samer El Hayek, 2022-12-01 **The Public Brain** Joss Hands, 2025-10-02 Joss Hands connects the historic

understanding of the brain with the history and politics and the democracy to address the current concerns about social media democratic collapse and technological control The Public Brain explores the way in which politics and the public sphere are understood in different societies and eras are explored in light of the dominant understanding of the brain in each

era in particular the use of the brain's capacities and character to justify the dominant political ideology of the time Moving from the birth of democracy through to the age of reason and revolution and on to the current social media era of nudge politics and new forms of political extremism the book traces the triangulation of brain public and media This includes and exploration of the role of social media platforms and their contribution to confusion and obfuscation in the current era It proposes different formulations of the public brain over those eras to conclude by advocating for a democratic public brain The book explores what has been largely overlooked in this field unpicks this history in order to offer valuable insights into the debates over the contemporary condition across a range of issues such as neoliberalism self help and wellbeing as forms of ideology and control the shift to extremist proto fascist politics and of post truth The book unpacks arguments about affect and cognitive overload to make a positive case for the continuing power of reason and its emancipatory potential In that way the book provides a valuable insight into how we have come to view the brain as we have how that view is often misused and offers suggestions of ways to marshal an enriched democratic concept of the public brain for positive social change

Gordon,Marina R. Picciotto,2025-01-03 The genetic investigation into mental illnesses has progressed rapidly since the mapping of the human genome Driven by advances in genomic profiling technology massive genomic datasets are powering the discovery of genetic variation associated to complex traits including mental illness From severe neurodevelopmental disorders to schizophrenia and depression genetic variation plays some role in risk Critically most mental illnesses are complex multifactorial and the consequence of a combination of genetic and environmental influences This chapter will introduce the genome its variation and the methods used to identify what variants and genes matter for mental illnesses

Neurological Functions of the Masterswitch Protein Kinase - GSK-3 Oksana Kaidanovich-Beilin,Jean-Martin Beaulieu,Richard S. Jope,Jim R. Woodgett, The functions of the brain that allow us to think feel move and perceive the world are the result of an exchange of information within a network composed of millions of specialized cells called neurons and glia Neurons use neurotransmitters and other extracellular messengers to communicate with each other and to constantly update and re organize their network of connections in a process known as neural plasticity In order to respond to these extracellular signals neurons are equipped with specialized receptors that can recognize a single neurotransmitter a bit like a lock would recognize a key They do this by activating or inhibiting a class of specialized signaling proteins and second messengers Typically signaling proteins are themselves organized in networks or pathways in which they activate or inhibit each other in order to integrate the mass of information received by a single cell and to regulate the biological functions of this cell As we can see rather than simply being a network of neurons the brain can be seen as a sort of Russian doll in which each neuron is at the same time a part of networks with other neurons and the receptacle of many networks composed of signaling proteins Two individual genes encode two paralogous signaling proteins Glycogen Synthase Kinase 3 alpha and

beta GSK 3a GSK 3b named for its ability to phosphorylate a key metabolic enzyme of glycogen synthesis glycogen synthase This unique glamour and gloom protein kinase has been intriguing many researches for over 30 years by its unusual features still unknown mechanisms of its activation its regulation by multiple key intracellular pathways and its capacity to influence the functions of many substrates Since GSK 3 was discovered there has been significant progress in elucidating its regulatory roles in the neuron and the structure and functions of the brain Lithium has been used as a gold standard in the treatment of bipolar disorder for 60 years and GSK 3 s renaissance in psychiatry began with the discovery of GSK 3 as lithium s intracellular target Since then GSK3 has been implicated in the pathogenesis of mood disorders schizophrenia Alzheimer s disease ADHD multiple sclerosis Fragile X syndrome and Huntington disease Connections to these and other diseases has led over the last 10 years to the generation of multiple types of GSK 3 inhibitors as promising therapeutic treatments for the aforementioned pathological conditions During last couple years new genetic models have been generated including conventional and conditional mouse models allowing the discovery of new roles of GSK 3 in the mechanism of neurotransmitter action neurodevelopment learning and memory formation GSK 3 s gene effect on mouse behavior and other functions Thus GSK 3 has been well established as an intracellular second messenger for several neurotransmitter systems and as an important therapeutic target of mood stabilizers antipsychotics and psychomimetic drugs The proposed Specific Topic for Frontiers in Neuroscience will be focused on the latest advances from leading laboratories in this area subdivided into 5 topics 1 GSK 3 history mechanism of regulation substrate specificity and comparison between the brain function of two GSK 3 genes through new animal models and cell biology approaches 2 role of GSK 3 in neurodevelopment and neuronal structure 3 involvement of GSK 3 in synaptic functions learning and memory and in serotonin and dopamine pathways 4 role of GSK 3 in neuroinflammation and application to the pathogenesis of multiple sclerosis AD schizophrenia Fragile X brain tumors stroke and bipolar disorder 5 development of GSK 3 inhibitors and their application in psychiatry including special discussion about the mechanism of lithium action
