If the moon's spin is tidally-locked so that it's synchronized with its rotational rate (causing it to almost always look the same from Earth), once humans colonize the moon, will the lunar inhabitants experience "day" and "night" on the moon? r/askscience

Astronomy

I was thinking earlier if lunar colonization might cause there to be a need for lunar time zones, but then I started thinking more about how the same part of the moon always faces us. So, I got to reading about how the moon spins on its axis, but the tidal bulge slowed its rotation to eventually make it look like it's the same part facing us. Would that experience be the same on the surface of the moon? Forgive my ignorance. My one regret about my education (I'm 48) is that I never took physics or astronomy. Thank you in advance.

The Sun will rise, move across the sky, and set, over the course of 2 Earth weeks. However, the Earth will always be in the same fixed position in the sky, and will only move if you move to a different position on the Moon (if you're on the far side
