Performance and Implementation Aspects of Nonlinear Filtering Gustaf Hendeby,2008-02-15 Nonlinear filtering is an important standard tool for information and sensor fusion applications e g localization navigation and tracking It is an essential component in surveillance systems and of increasing importance for standard consumer products such as cellular phones with localization car navigation systems and augmented reality This thesis addresses several issues related to nonlinear filtering including performance analysis of filtering and detection algorithm analysis and various implementation details The most commonly used measure of filtering performance is the root mean square error RMSE which is bounded from below by the Cram r Rao lower bound CRLB This thesis presents a methodology to determine the effect different noise distributions have on the CRLB This leads up to an analysis of the intrinsic accuracy IA the informativeness of a noise distribution For linear systems the resulting expressions are direct and can be used to determine whether a problem is feasible or not and to indicate the efficacy of nonlinear methods such as the particle filter PF A similar analysis is used for change detection performance analysis which once again shows the importance of IA A problem with the RMSE evaluation is that it captures only one aspect of the resulting estimate and the distribution of the estimates can differ substantially To solve this problem the Kullback divergence has been evaluated demonstrating the shortcomings of pure RMSE evaluation Two estimation algorithms have been analyzed in more detail the Rao Blackwellized particle filter RBPF by some authors referred to as the marginalized particle filter MPF and the unscented Kalman filter UKF The RBPF analysis leads to a new way of presenting the algorithm thereby making it easier to implement In addition the presentation can possibly give new intuition for the RBPF as being a stochastic Kalman filter bank In the analysis of the UKF the focus is on the unscented transform UT The results include several simulation studies and a comparison with the Gauss approximation of the first and second order in the limit case This thesis presents an implementation of a parallelized PF and outlines an object oriented framework for filtering The PF has been implemented on a graphics processing unit GPU i e a graphics card The GPU is a inexpensive parallel computational resource available with most modern computers and is rarely used to its full potential Being able to implement the PF in parallel makes new applications where speed and good performance are important possible The object oriented filtering framework provides the flexibility and performance needed for large scale Monte Carlo simulations using modern software design methodology It can also be used to help to efficiently turn a prototype into a finished product

Handbook of Optimization Ivan Zelinka,Václav Snásel,Ajith Abraham,2012-08-13 Optimization problems were and still are the focus of mathematics from antiquity to the present Since the beginning of our civilization the human race has had to confront numerous technological challenges such as finding the optimal solution of various problems including control technologies power sources construction applications in economy mechanical engineering and energy distribution amongst others These examples encompass both ancient as well as modern technologies like the first electrical energy distribution network in USA etc Some of the key principles formulated in the middle ages were done by Johannes Kepler Problem of the wine barrels Johan Bernoulli brachistochrone problem Leonhard Euler Calculus of Variations Lagrange Principle multipliers that were formulated primarily in the ancient world and are of a geometric nature In the beginning of the modern era works of L V Kantorovich and G B Dantzig so called linear programming can be considered amongst others This book discusses a wide spectrum of optimization methods from classical to modern alike heuristics Novel as well as classical techniques is also discussed in this book including its mutual intersection Together with many interesting chapters a reader will also encounter various methods used for proposed optimization approaches such as game theory and evolutionary algorithms or modelling of evolutionary algorithm dynamics like complex networks

Applications, Tools and Techniques on the Road to Exascale Computing Koen de Bosschere,Mark Sawyer,2012 Single processing units have now reached a point where further major improvements in their performance are restricted by their physical limitations This is causing a slowing down in advances at the same time as new scientific challenges are demanding exascale speed This has meant that parallel processing has become key to High Performance Computing HPC This book contains the proceedings of the 14th biennial ParCo conference ParCo2011 held in Ghent Belgium The ParCo conferences have traditionally concentrated on three main themes Algorithms Architectures and Applications Nowadays though the focus has shifted from traditional multiprocessor topologies to heterogeneous and manycores incorporating standard CPUs GPUs Graphics Processing Units and FPGAs Field Programmable Gate Arrays These platforms are at a higher abstraction level

integrated in clusters grids and clouds The papers presented here reflect this change of focus New architectures programming tools and techniques are also explored and the need for exascale hardware and software was also discussed in the industrial session of the conference This book will be of interest to all those interested in parallel computing today and progress towards the exascale computing of tomorrow
