Directorate for Science Education,1979 **DATA SCIENCE FOR SALES ANALYSIS, FORECASTING, CLUSTERING, AND PREDICTION WITH PYTHON** Vivian Siahaan,Rismon Hasiholan Sianipar,2023-07-28 In this comprehensive data science project focusing on sales analysis forecasting clustering and prediction with Python we embarked on an enlightening journey of data exploration and analysis Our primary objective was to gain valuable insights from the dataset and leverage the power of machine learning to make accurate predictions and informed decisions We began by meticulously exploring the dataset examining its structure and identifying any missing or inconsistent data By visualizing features distributions and conducting statistical analyses we gained a better understanding of the data s characteristics and potential challenges The first key aspect of the project was weekly sales forecasting We employed various machine learning regression models including Linear Regression Support Vector Regression Random Forest Regression Decision Tree Regression Gradient Boosting Regression Extreme Gradient Boosting Regression Light Gradient Boosting Regression KNN Regression Catboost Regression Na ve Bayes Regression and Multi Layer Perceptron Regression These models enabled us to predict weekly sales based on relevant features allowing us to uncover patterns and relationships between different factors and sales performance To optimize the performance of our regression models we employed grid search with cross validation This technique systematically explored hyperparameter combinations to find the optimal configuration maximizing the models accuracy and predictive capabilities Moving on to data segmentation we adopted the widely used K means clustering technique an unsupervised learning method The goal was to divide data into distinct segments By determining the optimal number of clusters through grid search with cross validation we ensured that the clustering accurately captured the underlying patterns in the data The next phase of the project focused on predicting the cluster of new customers using machine learning classifiers We employed powerful classifiers such as Logistic Regression K Nearest Neighbors Support Vector Decision Trees Random Forests Gradient Boosting Adaboost Extreme Gradient Boosting Light Gradient Boosting and Multi Layer Perceptron MLP to make accurate predictions Grid search with cross validation was again applied to fine tune the classifiers hyperparameters enhancing their performance Throughout the project we emphasized the significance of feature scaling techniques such as Min Max scaling and Standardization These preprocessing steps played a crucial role in ensuring that all features were on the same scale contributing equally during model training and improving the models interpretability Evaluation of our models was conducted using various metrics For regression tasks we utilized mean squared error while classification tasks employed accuracy precision recall and F1 score The use of cross validation helped validate the models robustness providing comprehensive assessments of their effectiveness Visualization played a vital role in presenting our findings effectively Utilizing libraries such as Matplotlib and Seaborn we created informative visualizations that facilitated

the communication of complex insights to stakeholders and decision makers Throughout the project we followed an iterative approach refining our strategies through data preprocessing model training and hyperparameter tuning The grid search technique proved to be an invaluable tool in identifying the best parameter combinations resulting in more accurate predictions and meaningful customer segmentation In conclusion this data science project demonstrated the power of machine learning techniques in sales analysis forecasting and customer segmentation The insights and recommendations generated from the models can provide valuable guidance for businesses seeking to optimize sales strategies target marketing efforts and make data driven decisions to achieve growth and success The project showcases the importance of leveraging advanced analytical methods to unlock hidden patterns and unleash the full potential of data for business success
