Molecular Carcinogenesis and the Molecular Biology of Human Cancer David Warshawsky, Joseph R. Landolph Jr., 2005-10-31 To gain a complete overview of what is presently known about molecular carcinogenesis would prove to be a very daunting task for those not already steeped in this complex subject Providing an in depth summary of the molecular aspects of carcinogenesis this text comprehensively covers chemical radiation and viral carcinogenesis from animal and human test data to metabolism and DNA binding It covers organic and metal carcinogenesis related to lung breast prostate skin liver colon brain and thyroid cancers The book explores the human implications of data regarding oncogenesis of transgenic and knockout mice and rats It also covers the genomics and proteomics of chemoprevention risk and exposure assessments and regulation of carcinogens **Molecular Carcinogenesis and the Molecular Biology of Human Cancer** is an ideal text for graduate courses in cancer

Molecular Biology of Human Cancers Wolfgang A. Schulz, 2023 This textbook describes the most relevant molecular and biological processes in cancer how they contribute to the development and progression of individual cancer types in humans and how insights from molecular cancer research can be applied to improve cancer prevention diagnostics and treatment Part I of the textbook summarizes the current fundamental knowledge on the general properties of cancers the causes of cancer cancer genetics genomics and epigenetics Individual chapters address the functions of DNA damage and repair oncogenes and tumor suppressors in carcinogenesis and discuss crucial mechanisms in cancer pathogenesis such as apoptosis and replicative senescence as well as the most relevant signal transduction pathways and regulatory networks Part I concludes with a chapter on tumor invasion and metastasis and tumor immunology In Part II the most relevant mechanisms acting in individual human cancers and subtypes are described in more detail This central part of the book contains individual sections on the most common human cancers highlighting the diversity in their genetic molecular and cellular pathogenic mechanisms How insights from molecular cancer research are translated into improvements in prevention diagnosis and treatment is outlined in Part III This new edition has been extensively revised and includes in particular updated information on cancer genomics epigenetics viral carcinogenesis cancer diagnostics and cancer therapy and a new chapter on lung cancers Now more than ever cancer research is an interdisciplinary endeavor that requires a basic knowledge of commonly used terms facts and concepts The aim of this book is to provide advanced students and practitioners in various disciplines with this foundation bridging the gap between standard textbooks of molecular biology pathology and oncology on the one hand and the specialized cancer literature on the other

Mechanisms of Molecular Carcinogenesis - Volume 1 Johannes Haybaeck, 2017-05-23 Divided into two volumes the work offers a so far unmatched broad and at the same time deep knowledge on molecular and cellular mechanisms of carcinogenesis and offers comprehensive insight into clinical therapeutic and technological aspects This 1st Volume presents tumor entities of the

ocular system the thyroid organ the oesophagus gliomas non glial brain tumors head and neck as well as lung cancer In addition it also discusses in depth potential novel molecular players and the role of stem cells as well as the endocannabinoid system in carcinogenesis it furthermore explains tumor metabolism components and signaling pathways Each of the chapters discusses potential therapeutic strategies and novel drug targets The book addresses basic scientists and medical researchers interested in translational cancer research Molecular Biology of Human Cancers Wolfgang

Schulz,2005-02-09 Cancer research is now an interdisciplinary effort requiring a basic knowledge of commonly used terms facts issues and concepts This interdisciplinary book meets this need providing an authoritative overview to the field It presents many of the molecules and mechanisms generally important in human cancers and examines a broad but exemplary selection of cancers In addition cancer research has now reached a critical stage in which the accumulated knowledge on molecular mechanisms is gradually translated into improved prevention diagnosis and treatment This book summarizes the state pitfalls and potential of these efforts *Mechanisms of Molecular Carcinogenesis - Volume 2* Johannes

Haybaeck,2017-05-22 Together with Volume 1 this book provides an inclusive overview of the molecular and cellular mechanisms of carcinogenesis and offers comprehensive insights into related clinical and therapeutic aspects This second volume complements the first by presenting and concisely explaining the carcinogenesis of various tumor entities such as non melanoma skin cancers bone and soft tissue tumors pancreatic cancers hepatocellular cancer and neuroendocrine tumors As in volume one each chapter illuminates the similarities and dissimilarities of changed signaling pathways in the different organ systems and depicts potential therapeutic strategies The focus of volume two lies on the presentation of modern molecular biological techniques for diagnosis as well as strategies for biomarker identification and validation Furthermore it discusses potential therapeutic targets and individualized treatment strategies offering a valuable resource for all basic scientists and medical researchers interested in translational cancer research **Research Awards Index**
