Molecular Mechanisms In Yeast Carbon Metabolism:

Molecular Mechanisms in Yeast Carbon Metabolism Jure Piškur, Concetta Compagno, 2014-05-06 Yeast is one of the most studied laboratory organisms and represents one of the most central models to understand how any eukaryote cell works On the other hand yeast fermentations have for millennia provided us with a variety of biotech products like wine beer vitamins and recently also with pharmaceutically active heterologous products and biofuels A central biochemical activity in the yeast cell is the metabolism of carbon compounds providing energy for the whole cell and precursors for any of the final fermentation products A complex set of genes and regulatory pathways controls the metabolism of carbon compounds from nutrient sensing signal transduction transcription regulation and post transcriptional events Recent advances in comparative genomics and development of post genomic tools have provided further insights into the network of genes and enzymes and molecular mechanisms which are responsible for a balanced metabolism of carbon compounds in the yeast cell and which could be manipulated in the laboratory to increase the yield and quality of yeast biotech products This book provides a dozen of most comprehensive reviews on the recent developments and achievements in the field of yeast carbon metabolism from academic studies on gene expression to biotechnology relevant topics Biotechnology of Yeasts and Filamentous Fungi Andriy A. Sibirny, 2025-02-25 This updated and extended second edition provides a comprehensive overview on biotechnological applications of unicellular and multicellular fungi in a variety of industrial settings Each chapter is dedicated to applications and potential beneficial use of particular strains of yeasts and filamentous fungi and their produced biomolecules ranging from glycerol to carotenoids This new edition further includes a brand new chapter on lactic acid production in yeast Targeted genetic and metabolic engineering of fungi allows production of native and transgenic enzymes and proteins in industrial scales Those most prominently find application in biorefineries for the production of value added chemicals and biofuels in the pharmaceutical industry as well as in biomedicine This volume addresses researchers from both academia and industry and graduate students working in microbial biotechnology **Biomedical Index to PHS-supported Research** ,1990 **Research Awards Index** ,1989 **Introduction.
