Stephenson,2010-07-30 Calculations for Molecular Biology and Biotechnology A Guide to Mathematics in the Laboratory Second Edition provides an introduction to the myriad of laboratory calculations used in molecular biology and biotechnology The book begins by discussing the use of scientific notation and metric prefixes which require the use of exponents and an understanding of significant digits It explains the mathematics involved in making solutions the characteristics of cell growth the multiplicity of infection and the quantification of nucleic acids It includes chapters that deal with the mathematics involved in the use of radioisotopes in nucleic acid research the synthesis of oligonucleotides the polymerase chain reaction PCR method and the development of recombinant DNA technology Protein quantification and the assessment of protein activity are also discussed along with the centrifugation method and applications of PCR in forensics and paternity testing Topics range from basic scientific notations to complex subjects like nucleic acid chemistry and recombinant DNA technology Each chapter includes a brief explanation of the concept and covers necessary definitions theory and rationale for each type

of calculation Recent applications of the procedures and computations in clinical academic industrial and basic research laboratories are cited throughout the text New to this Edition Updated and increased coverage of real time PCR and the mathematics used to measure gene expression More sample problems in every chapter for readers to practice concepts

Molecular Biology and Biotechnology C. A. Smith, E. J. Wood, 2012-10-23 This book is one of a series of brief fundamental texts for junior under graduates and diploma students in biological science The series Molecular and Cell Biochemistry covers the whole of modern biochemistry integrating animal plant and microbial topics The intention is to give the series special appeal to the many students who read biochemistry for only part of their course and who are looking for an all encompassing and stimulating approach Although all books in the series bear a distinct family likeness each stands on its own as an independent text Many students particularly those with less numerate backgrounds find elements of their biochemistry courses daunting and one of our principal concerns is to offer books which present the facts in a palatable style Each chapter is prefaced by a list of learning objectives with short summaries and revision aids at the ends of chapters The text itself is informal and the incorporation of marginal notes and information boxes to accompany the main text give a tutorial flavour complementing and supporting the main narrative The marginal notes and boxes relate facts in the text to applicable examples in everyday life in industry in other life sciences and in medicine and provide a variety of other educational devices to assist support and reinforce learning References are annotated to guide students towards effective and relevant additional reading
