The Equations of Life Charles S. Cockell,2018-06-19 A groundbreaking argument for why alien life will evolve to be much like life here on Earth We are all familiar with the popular idea of strange alien life wildly different from life on earth inhabiting other planets Maybe it s made of silicon Maybe it has wheels Or maybe it doesn t In The Equations of Life biologist Charles S Cockell makes the forceful argument that the laws of physics narrowly constrain how life can evolve making evolution s outcomes predictable If we were to find on a distant planet something very much like a lady bug eating something like an aphid we shouldn t be surprised The forms of life are guided by a limited set of rules and as a result there is a narrow set of solutions to the challenges of existence A remarkable scientific contribution breathing new life into Darwin s theory of evolution The Equations of Life makes a radical argument about what

life can and can't be **Moles** Patricia Whitehouse, 2004 This unique series explores the behavior of animals that make their homes underground including what the animal looks like what the animal eats how it builds its home and what is special about its home **The Living Animals of the World: Mammals** Charles John Cornish, Frederick Courteney Selous, Harry Johnston, Sir Herbert Maxwell, 1902

Predators with Pouches Menna Jones, Chris R. Dickman, 2003 Predators With Pouches deals with the carnivorous marsupial faunas of Australasia and the Americas Written by experts in each field from all over the world it provides a synthesis of current knowledge including paleontology ecology behavior and conservation

The Action Plan for Australian Mammals 2012 Andrew Burbidge, John Woinarski, Peter Harrison, 2014-06-02 The Action Plan for Australian Mammals 2012 is the first review to assess the conservation status of all Australian mammals It complements The Action Plan for Australian Birds 2010 Garnett et al 2011 CSIRO Publishing and although the number of Australian mammal taxa is marginally fewer than for birds the proportion of endemic extinct and threatened mammal taxa is far greater These authoritative reviews represent an important foundation for understanding the current status fate and future of the nature of Australia This book considers all species and subspecies of Australian mammals including those of external territories and territorial seas For all the mammal taxa about 300 species and subspecies considered Extinct Threatened Near Threatened or Data Deficient the size and trend of their population is presented along with information on geographic range and trend and relevant biological and ecological data The book also presents the current conservation status of each taxon under Australian legislation what additional information is needed for managers and the required management actions Recovery plans where they exist are evaluated The voluntary participation of more than 200 mammal experts has ensured that the conservation status and information are as accurate as possible and allowed considerable unpublished data to be included All accounts include maps based on the latest data from Australian state and territory agencies from published scientific literature and other sources The Action Plan concludes that 29 Australian mammal species have become extinct and 63 species are threatened and require urgent conservation action However it also shows that where guided by sound knowledge management capability and resourcing and longer term

commitment there have been some notable conservation success stories and the conservation status of some species has greatly improved over the past few decades The Action Plan for Australian Mammals 2012 makes a major contribution to the conservation of a wonderful legacy that is a significant part of Australia's heritage For such a legacy to endure our society must be more aware of and empathetic with our distinctively Australian environment and particularly its marvellous mammal fauna relevant information must be readily accessible environmental policy and law must be based on sound evidence those with responsibility for environmental management must be aware of what priority actions they should take the urgency for action and consequences of inaction must be clear and the opportunity for hope and success must be recognised It is in this spirit that this account is offered *Living animals of the world*, ed. by C.J. Cornish and other naturalists Living animals, 1901

Knowledge Production in Material Spaces Nikki Fairchild, Carol A. Taylor, Angelo Benozzo, Neil Carey, Mirka Koro, Constanse Elmenhorst, 2021-11-11 Knowledge Production in Material Spaces is a curation of the interventions that the authors undertook at a range of academic conferences since 2016 It problematizes disciplined practices and expectations governing academic conference spaces and generates new ways of thinking and doing conferences otherwise The authors use posthuman feminist materialist and post qualitative theories to disrupt knowledge production in neoliberal and bureaucratic conference spaces The analysis they offer and the rhizomatic writing and presentational styles they use promote a form of educational activism through theory They interrogate the conference space as a regulated normalized and standardized mode of academic knowledge production which they call the AcademicConferenceMachine and playfully subvert the dominant meanings and modes of conferences and workshops to show how we can better interact and produce research with and for each other The authors indicate how creative conference practices promote playful possibilities to imagine and produce knowledge differently This book will appeal to audiences ranging from established professionals to early career scholars doctoral and master's students in Education and the social sciences
