J.J. Lagowski,2012-12-02 *The Chemistry of Nonaqueous Solvents Volume V Acidic and Aprotic Solvents Part B* covers the theoretical aspects of individual solvents in nonaqueous solution chemistry This volume is divided into five chapters The first two chapters discuss the purification structure physical properties electrochemistry solubilities and reactions of specific solvents including trifluoroacetic and halosulfuric acids Chapter 3 deals briefly with the preparations and properties of the interhalogens principally in the liquid state This chapter emphasizes their uses as nonaqueous solvents especially through extensive study of their acid base reactions Spectroscopic data and their contribution to the understanding of their solution chemistries are also considered Chapter 4 surveys the autoionization purification methods solubilities solvolytic reactions conductivity conductometric potentiometric spectrophotometric and visual titrations as well as the isolation of solid complexes in inorganic halides and oxyhalides Chapter 5 describes the solubility reactivity and spectroscopic data of molten salts This book is of value to analytical chemists and analytical chemistry teachers and students

Nuclear Science Abstracts ,1974 Corrosion of Metals and Hydrogen-Related Phenomena J. Flis,2016-01-11 It is estimated that about 40% of the annual production of metals is used to repair or replace materials damaged by corrosion Corrosion causes waste of the natural material and energy resources it creates serious materials problems for many technologies and adversely affects almost every area of engineering The use of metals in various aggressive environments has resulted in an extremely wide diversity of corrosion problems This book presents a collection of concise reviews written by experts in the field on selected topics of metallic corrosion and on some aspects of interaction of hydrogen with metals A comprehensive range of problems is examined including localized corrosion high temperature corrosion in liquid metals and molten salts transport control in corrosion processes entry of hydrogen into metals hydrogen embrittlement and hydrogen reactions with metals The variety of topics covered in the book will provide corrosion scientists engineers university lecturers and students alike with an interdisciplinary approach to solving problems of materials degradation and surface processes in metal corrosion **Comprehensive Treatise of Electrochemistry** Peter Horsman,Brian E. Materials for Advanced Batteries D. Murphy, 2013-03-09 The idea of a NATO Science Committee Institute on Materials for Advanced Batteries was suggested to JB and DWM by Dr A G Chynoweth His idea was to bring together experts in the field over the entire spectrum of pure research to applied research in order to familiarize everyone with potentially interesting new systems and the problems involved in their development Dr M C B Hotz and Professor M N Ozdas were instrumental in helping organize this meeting as a NATO Advanced Science Institute An organizing committee consisting of the three of us along with W A Adams U v Alpen J Casey and J Rouxel organized the program The program consisted of plenary talks and poster papers which are included in this volume Nearly half the time of the conference was spent in study groups The aim of these groups was to assess the status of several key aspects of batteries and prospects for research opportunities in each The study groups and their chairmen were Current status and new systems J Broadhead High temperature systems W A Adams Interface problems B C H Steele Electrolytes U v Alpen Electrode materials J Rouxel These discussions are summarized in this volume We and all the conference participants are most grateful to Professor J Rouxel for suggesting the Aussois conference site and to both he and Dr M Armand for handling local arrangements

Ionic Liquids Douglas Inman, David G. Lovering, 2013-11-22 As Chairmen of the Electrochemistry and Molten Salts Discussion Groups of the Chemical Society it gave us great pleasure to welcome the conference Highly Concentrated Aqueous Solutions and Molten Salts which our Groups cosponsored at St John's College Oxford in July 1978 During the meeting the editors of the present volume and those giving lectures came to the conclusion that the verbal presentations deserved to be expanded and to be more widely disseminated in a permanent form Thus the articles which appear in this volume were commissioned and prepared A greater exchange of information between aqueous chemists and those concerned with molten salts is to be welcomed and to this end the present volume aims to focus attention on the borderline areas between the two in an attempt to facilitate a wider awareness of the concepts and methods appropriate to the respective specialities Similarly and particularly in the electrochemical field a greater exchange of information between the academic and industrial practitioners of the subject is desirable The problems involved are not trivial but when the interactions in these largely but not wholly ionic liquids are better understood this will surely be to the benefit of all concerned with solution chemistry Douglas Inman Imperial College Chairman Electrochemistry Group David Kerridge University of Southampton Chairman Molten Salts Discussion Group
