Modern Plasmonics Alexei A. Maradudin, J. Roy Sambles, William L. Barnes, 2014-09-10 Plasmonics is entering the curriculum of many universities either as a stand alone subject or as part of some course or courses Nanotechnology institutes have been and are being established in universities in which plasmonics is a significant topic of research Modern Plasmonics offers a comprehensive presentation of the properties of surface plasmon polaritons in systems of different structures and various natures e.g. active nonlinear graded theoretical computational and experimental techniques for studying them and their use in a variety of applications Contains material not found in existing books on plasmonics including basic properties of these surface waves theoretical computational and experimental approaches and new applications of them Each chapter is written by an expert in the subject to which it is devoted Emphasis on applications of plasmonics that have been realized not just predicted or proposed

Research advances in nanosciences, micro and nanotechnologies.

Volume V José Abraham Balderas López, Mónica Rosalía Jaime Fonseca, 2025-03-02 Many of the great advances in materials medical and measurement devices have been the result of research in the area of nanotechnology a multidisciplinary field to which many research groups in the world are dedicating their human and economic efforts A spectacular development of nanotechnology in the medical field was for instance the obtaining in record time of vaccines to face the recent COVID 19 pandemic others important advances are in the field of semiconductor devices with the development of integrated circuits with greater density of active elements as well as new light emitting devices or semiconductor materials for applications in optoelectronics It is not surprising then that many research groups in Mexico are devoted to do research in this field of science and technology especially due the fact of the transfer of industries which are expecting to be moved to the country as result of the nearshoring that is the transfer of factories from the country of origin to places close to the market Because of these facts the National Polytechnic Institute one of the best research institutions in Mexico is carrying out active research in the field of nanotechnology in its multiple disciplines Some of these results are summarized in this new volume which constitutes the fifth in a series of books generated as result of investigations of members of the nanoscience and micro nanotechnologies network of the National Polytechnic Institute
