Modern Typography Robin Kinross, 2004 In a survey of developments since 1700 this book proposes a new understanding of modern typography as something larger and more deeply rooted than a modernism of style Rather modern is taken to imply an articulate consciousness of action The book's treatment lays stress on debates over principle and explanations of practice But full weight is given to the social technical and material bases of the activity and the argument is illustrated by freshly made photographs of items not often reproduced before Sources of information are discussed and extensively listed The book thus contributes on several levels as a brisk narrative of historical development as a springboard for further investigation as a delineation of modern typography Published first in 1992 Modern typography is now issued in a revised and updated second edition

Human Factors Engineering and Ergonomics Stephen J. Guastello, 2013-12-19 Although still true to its original focus on the person machine interface the field of human factors psychology ergonomics has expanded to include stress research accident analysis and prevention and nonlinear dynamical systems theory how systems change over time human group dynamics and environmental psychology Reflecting new developments in the field Human Factors Engineering and Ergonomics A Systems Approach Second Edition addresses a wide range of human factors and ergonomics principles found in conventional and twenty first century technologies and environments Based on the author's thirty years of experience the text emphasizes fundamental concepts systems thinking the changing nature of the person machine interface and the dynamics of systems as they change over time See What's New in the Second Edition Developments in working memory degrees of freedom in cognitive processes subjective workload decision making and situation awareness Updated information on cognitive workload and fatigue Additional principles for HFE networks multiple person machine systems and human robot swarms Accident analysis and prevention includes resilience new developments in safety climate and an update to the inventory of accident prevention techniques and their relative effectiveness Problems in big data mining Psychomotor control and its relevance to human robot systems Navigation in real world environment Trust in automation and augmented cognition Computer technology permeates every aspect of the human machine system and has only become more ubiquitous since the previous edition The systems are becoming more complex so it should stand to reason that theories need to evolve to cope with the new sources of complexity While many books cover traditional topics and theory they do not focus on the practical problems students will face in the future With broad coverage that ranges from physical ergonomics to cognitive aspects of human machine interaction and includes dynamic approaches to system failure this book increases the number of methods and analytical tools that are available for the human factors researcher
