Moduli Spaces Of Riemann Surfaces Iaspark City Mathematics Series:

Moduli Spaces of Riemann Surfaces Benson Farb, Richard Hain, Eduard Looijenga, 2013-08-16 Mapping class groups and moduli spaces of Riemann surfaces were the topics of the Graduate Summer School at the 2011 IAS Park City Mathematics Institute. This book presents the nine different lecture series comprising the summer school covering a selection of topics of current interest. The introductory courses treat mapping class groups and Teichmüller theory. The more advanced courses cover intersection theory on moduli spaces, the dynamics of polygonal billiards and moduli spaces, the stable cohomology of mapping class groups, the structure of Torelli groups and arithmetic mapping class groups. The courses consist of a set of intensive short lectures offered by leaders in the field designed to introduce students to exciting current research in mathematics. These lectures do not duplicate standard courses available elsewhere. The book should be a valuable resource for graduate students and researchers interested in the topology, geometry and dynamics of moduli spaces of Riemann surfaces and related topics. Titles in this series are co-published with the Institute for Advanced Study, Park City Mathematics Institute. Members of the Mathematical Association of America (MAA) and the National Council of Teachers of Mathematics (NCTM) receive a 20% discount from list price.

Moduli of K-stable Varieties Giulio Codogni, Ruadhaí Dervan, Filippo Viviani, 2019-06-27 This volume is an outcome of the workshop Moduli of K-stable Varieties which was held in Rome, Italy, in 2017. The content focuses on the existence problem for canonical Kähler metrics and links to the algebro-geometric notion of K-stability. The book includes both surveys on this problem, notably in the case of Fano varieties, and original contributions addressing this and related problems. The papers in the latter group develop the theory of K-stability, explore canonical metrics in the Kähler and almost Kähler settings, offer new insights into the geometric significance of K-stability, and develop tropical aspects of the moduli space of curves, the singularity theory necessary for higher-dimensional moduli theory, and the existence of minimal models. Reflecting the advances made in the area in recent years, the survey articles provide an essential overview of many of the most important findings. The book is intended for all advanced graduate students and researchers who want to learn about recent developments in the theory of moduli space, K-stability, and Kähler-Einstein metrics.

A Celebration of Algebraic Geometry Brendan Hassett, James McKernan, Jason Starr, Ravi Vakil, 2013-09-11 This volume resulted from the conference A Celebration of Algebraic Geometry which was held at Harvard University from August 25-28, 2011, in honor of Joe Harris' 60th birthday. Harris is famous around the world for his lively textbooks and enthusiastic teaching, as well as for his seminal research contributions. The articles are written in this spirit: clear, original, engaging, enlivened by examples, and accessible to young mathematicians. The articles in this volume focus on the moduli space of curves and more general varieties, commutative algebra, invariant theory, enumerative geometry, both classical and modern, rationally connected and Fano varieties, Hodge theory, and abelian varieties and Calabi-Yau and hyperkähler manifolds. Taken together, they present a comprehensive view of the long frontier of current knowledge in algebraic geometry. Titles in this series are co-published

Hodge theory Surveys contain many examples exercises and open problems which will make this volume an invaluable and enduring resource for researchers looking for new directions

Koszul Cohomology and Algebraic Geometry Marian Aprodu, Jan Nagel, 2010 The systematic use of Koszul cohomology computations in algebraic geometry can be traced back to the foundational work of Mark Green in the 1980s Green connected classical results concerning the ideal of a projective variety with vanishing theorems for Koszul cohomology Green and Lazarsfeld also stated two conjectures that relate the Koszul cohomology of algebraic curves with the existence of special divisors on the curve These conjectures became an important guideline for future research In the intervening years there has been a growing interaction between Koszul cohomology and algebraic geometry Green and Voisin applied Koszul cohomology to a number of Hodge theoretic problems with remarkable success More recently Voisin achieved a breakthrough by proving Green's conjecture for general curves soon afterwards the Green Lazarsfeld conjecture for general curves was proved as well This book is primarily concerned with applications of Koszul cohomology to algebraic geometry with an emphasis on syzygies of complex projective curves The authors main goal is to present Voisin's proof of the generic Green conjecture and subsequent refinements They discuss the geometric aspects of the theory and a number of concrete applications of Koszul cohomology to problems in algebraic geometry including applications to Hodge theory and to the geometry of the moduli space of curves

Geometry and Physics of Branes U Bruzzo, V. Gorini, U. Moschella, 2002-11-05 Branes are solitonic configurations of a string theory that are represented by extended objects in a higher dimensional space time They are essential for a comprehension of the non perturbative aspects of string theory in particular in connection with string dualities From the mathematical viewpoint branes are related to several important theorems

Current Trends in Transformation Groups Anthony Bak, Masaharu Morimoto, Fumihiro Ushitaki, 2002-07-31 This book provides an overview of some of the most active topics in the theory of transformation groups over the past decades and stresses advances obtained in the last dozen years The emphasis is on actions of Lie groups on manifolds and CW complexes Manifolds and actions of Lie groups on them are studied in the linear semialgebraic definable analytic smooth and topological categories Equivalent vector bundles play an important role The work is divided into fifteen articles and will be of interest to anyone researching or studying transformations groups The references make it easy to find details and original accounts of the topics surveyed including tools and theories used in these accounts

Moduli of Riemann Surfaces, Real Algebraic Curves, and Their Superanalogs S. M. Natanzon, 2004 The space of all Riemann surfaces the so called moduli space plays an important role in algebraic geometry and its applications to quantum field theory The present book is devoted to the study of topological properties of this space and of similar moduli spaces such as the space of real algebraic

curves the space of mappings and also superanalogues of all these spaces The book can be used by researchers and graduate students working in algebraic geometry topology and mathematical physics

Mapping Class Groups and Moduli Spaces of Riemann Surfaces, 1993 **An Introduction to Riemann Surfaces, Algebraic Curves and Moduli Spaces**

Martin Schlichenmaier, 2010-02-11 This book gives an introduction to modern geometry Starting from an elementary level the author develops deep geometrical concepts that play an important role in contemporary theoretical physics presenting various techniques and viewpoints along the way This second edition contains two additional more advanced geometric techniques the modern language and modern view of Algebraic Geometry and Mirror Symmetry *Moduli Spaces of Curves, Mapping Class Groups and Field Theory* Xavier Buff, 2003 It concludes with a study of the canonical Galois action on the fundamental groupoids computed using Grothendieck Teichmüller theory Finally Chapter 3 studies strict ribbon categories which are closely related to braided tensor categories here they are used to construct invariants of 3 manifolds which in turn give rise to quantum field theories **BOOK JACKET** *Geometry and Quantization of Moduli Spaces* Vladimir Fock, Andrey Marshakov, Florent Schaffhauser, Constantin Teleman, Richard Wentworth, 2016-12-25 This volume is based on four advanced courses held at the Centre de Recerca Matemàtica CRM Barcelona It presents both background information and recent developments on selected topics that are experiencing extraordinary growth within the broad research area of geometry and quantization of moduli spaces The lectures focus on the geometry of moduli spaces which are mostly associated to compact Riemann surfaces and are presented from both classical and quantum perspectives

Geometry of Moduli Spaces and Representation Theory Roman Bezrukavnikov, Alexander Braverman, Zhiwei Yun, 2017 This book is based on lectures given at the Graduate Summer School of the 2015 Park City Mathematics Institute program Geometry of moduli spaces and representation theory and is devoted to several interrelated topics in algebraic geometry topology of algebraic varieties and representation theory Geometric representation theory is a young but fast developing research area at the intersection of these subjects An early profound achievement was the famous conjecture by Kazhdan Lusztig about characters of highest weight modules over a complex semi simple Lie algebra and its subsequent proof by Beilinson Bernstein and Brylinski Kashiwara Two remarkable features of this proof have inspired much of subsequent development intricate algebraic data turned out to be encoded in topological invariants of singular geometric spaces while proving this fact required deep general theorems from algebraic geometry Another focus of the program was enumerative algebraic geometry Recent progress showed the role of Lie theoretic structures in problems such as calculation of quantum cohomology K theory etc Although the motivation and technical background of these constructions is quite different from that of geometric Langlands duality both theories deal with topological invariants of moduli spaces of maps from a target of complex dimension one Thus they are at least heuristically related while several recent works indicate possible strong technical connections The main goal of this collection of notes is to provide young researchers and experts alike with an introduction to these areas of active research

and promote interaction between the two related directions
