Molecular Biology Of The Male Reproductive System:

Molecular Biology of the Male Reproductive System David de Kretser, 2012-12-02 Written by experts in their respective fields this book reviews the expanding knowledge concerning the mechanisms regulating male reproduction at the molecular and cellular levels It covers the development of the testes and regulatory controls for spermatogenesis and steroidogenesis and it considers aspects of Sertoli cell function Areas of emphasis include communication between the various cell types involved in reproduction by hormone and growth factors and the mechanisms by which these factors regulate gene expression A number of mammalian systems including humans are covered The carefully selected authors provide a clear synopsis of the concepts in each area as well as the latest references enabling the reader to investigate the topic further This book is of interest to those seeking an understanding of the regulatory mechanisms in male reproduction and is written for the graduate and postgraduate levels Provides up to date reviews of the molecular and cellular biology of male reproduction Includes chapters on the developmental biology of the testes Links conventional hormonal control of testicular function with the evolving role of growth factors and proto oncogenes

Cellular and Molecular Regulation of Testicular Cells Claude Desjardins, 2012-12-06 Conceptual advances in the biological sciences are marked by the application of new techniques and experimental strategies Nowhere has this generic principle been more apparent than in the study of testicular cells as judged by the evolution of themes presented at the Testis Workshop over the past 23 years Like its predecessors the 1995 Testis Workshop was structured to offer fresh insights and approaches for understanding the mechanisms of spermatogenesis and steroidogenesis The chapters presented in this book emphasize three aspects of testicular cell function first the molecular analysis of the cell cycle second examination of the cell cycle including the function and identification of specific macromolecules that direct the proliferation and differentiation of germ cells and third the development of Leydig cells and the role of specific macromolecules in the

formation of testicular steroids Each chapter is based on a lecture presented at the XIIIth Testis Work shop held on March 30 to April 1 1995 at the Radisson Plaza Hotel in Raleigh North Carolina The selection of topics reflects the recommendations of the workshop S organizing committee Sincere thanks are due to the speakers who agreed to lecture and prepare chapters

Molecular Biology of Metal Homeostasis and Detoxification Markus J. Tamás, Enrico Martinoia, 2006-07-07 One of the challenges faced by every cell as well as by whole organisms is to maintain appropriate concentrations of essential nutrient metals while excluding nonessential toxic metals Toward that end all organisms have developed mechanisms for metal homeostasis and detoxification to maintain metal levels within physiological limits This book brings together current knowledge of the molecular basis of metal homeostasis and detoxification in various eukaryotic model systems including yeasts plants and mammals It focuses on the cellular systems controlling metal transport intracellular distribution and immobilization as well as on systems regulating metal dependent transcription In addition to environmental aspects including phytoremediation the book treats the pathophysiology of metal deficiency and overload in relation to disease
