Nvidia Gpu Near Me Setup:

Accelerating MATLAB with GPU Computing Jung W. Suh, Youngmin Kim, 2013-11-18 Beyond simulation and algorithm development many developers increasingly use MATLAB even for product deployment in computationally heavy fields This often demands that MATLAB codes run faster by leveraging the distributed parallelism of Graphics Processing Units GPUs While MATLAB successfully provides high level functions as a simulation tool for rapid prototyping the underlying details and knowledge needed for utilizing GPUs make MATLAB users hesitate to step into it Accelerating MATLAB with GPUs offers a primer on bridging this gap Starting with the basics setting up MATLAB for CUDA in Windows Linux and Mac OS X and profiling it then guides users through advanced topics such as CUDA libraries The authors share their experience developing algorithms using MATLAB C and GPUs for huge datasets modifying MATLAB codes to better utilize the computational power of GPUs and integrating them into commercial software products Throughout the book they demonstrate many example codes that can be used as templates of C MEX and CUDA codes for readers projects Download example codes from the publisher s website <http://booksite.elsevier.com/9780124080805> Shows how to accelerate MATLAB codes through the GPU for parallel processing with minimal hardware knowledge Explains the related background on hardware architecture and programming for ease of use Provides simple worked examples of MATLAB and CUDA C codes as well as templates that can be reused in real world projects

GPU Parallel Program Development Using CUDA Tolga Soyata, 2018-01-19 GPU Parallel Program Development using CUDA teaches GPU programming by showing the differences among different families of GPUs This approach prepares the reader for the next generation and future generations of GPUs The book emphasizes concepts that will remain relevant for a long time rather than concepts that are platform specific At the same time the book also provides platform dependent explanations that are as valuable as generalized GPU concepts The book consists of three separate parts it starts by explaining parallelism using CPU multi threading in Part I A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads Multiple ways of parallelizing the same task are analyzed and their pros cons are studied in terms of both core and memory operation Part II of the book introduces GPU massive parallelism The same programs are parallelized on multiple Nvidia GPU platforms and the same performance analysis is repeated Because the core and memory structures of CPUs and GPUs are different the results differ in interesting ways The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs Part III of the book provides pointer for readers who want to expand their horizons It provides a brief introduction to popular CUDA libraries such as cuBLAS cuFFT NPP and Thrust the OpenCL programming language an overview of GPU programming using other programming languages and API libraries such as Python OpenCV OpenGL and Apple s Swift and Metal and the deep learning library cuDNN

Hands-On Deep Learning with Go Gareth Seneque, Darrell

Chua,2019-08-08 Apply modern deep learning techniques to build and train deep neural networks using Gorgonia Key FeaturesGain a practical understanding of deep learning using GolangBuild complex neural network models using Go libraries and GorgoniaTake your deep learning model from design to deployment with this handy guideBook Description Go is an open source programming language designed by Google for handling large scale projects efficiently The Go ecosystem comprises some really powerful deep learning tools such as DQN and CUDA With this book you ll be able to use these tools to train and deploy scalable deep learning models from scratch This deep learning book begins by introducing you to a variety of tools and libraries available in Go It then takes you through building neural networks including activation functions and the learning algorithms that make neural networks tick In addition to this you ll learn how to build advanced architectures such as autoencoders restricted Boltzmann machines RBMs convolutional neural networks CNNs recurrent neural networks RNNs and more You ll also understand how you can scale model deployments on the AWS cloud infrastructure for training and inference By the end of this book you ll have mastered the art of building training and deploying deep learning models in Go to solve real world problems What you will learnExplore the Go ecosystem of libraries and communities for deep learningGet to grips with Neural Networks their history and how they workDesign and implement Deep Neural Networks in GoGet a strong foundation of concepts such as Backpropagation and MomentumBuild Variational Autoencoders and Restricted Boltzmann Machines using GoBuild models with CUDA and benchmark CPU and GPU modelsWho this book is for This book is for data scientists machine learning engineers and AI developers who want to build state of the art deep learning models using Go Familiarity with basic machine learning concepts and Go programming is required to get the best out of this book *Hands-On Artificial Intelligence for Beginners* Patrick D. Smith,2018-10-31 Grasp the fundamentals of Artificial Intelligence and build your own intelligent systems with ease Key FeaturesEnter the world of AI with the help of solid concepts and real world use casesExplore AI components to build real world automated intelligenceBecome well versed with machine learning and deep learning conceptsBook Description Virtual Assistants such as Alexa and Siri process our requests Google s cars have started to read addresses and Amazon s prices and Netflix s recommended videos are decided by AI Artificial Intelligence is one of the most exciting technologies and is becoming increasingly significant in the modern world Hands On Artificial Intelligence for Beginners will teach you what Artificial Intelligence is and how to design and build intelligent applications This book will teach you to harness packages such as TensorFlow in order to create powerful AI systems You will begin with reviewing the recent changes in AI and learning how artificial neural networks ANNs have enabled more intelligent AI You ll explore feedforward recurrent convolutional and generative neural networks FFNNs RNNs CNNs and GNNs as well as reinforcement learning methods In the concluding chapters you ll learn how to implement these methods for a variety of tasks such as generating text for chatbots and playing board and video games By the end of this book you will be able to understand exactly what you need to consider when optimizing ANNs and how to deploy and

maintain AI applications What you will learn Use TensorFlow packages to create AI systems Build feedforward convolutional and recurrent neural networks Implement generative models for text generation Build reinforcement learning algorithms to play games Assemble RNNs CNNs and decoders to create an intelligent assistant Utilize RNNs to predict stock market behavior Create and scale training pipelines and deployment architectures for AI systems Who this book is for This book is designed for beginners in AI aspiring AI developers as well as machine learning enthusiasts with an interest in leveraging various algorithms to build powerful AI applications

Deep Learning for Engineers Tariq M. Arif, Md Adilur Rahim, 2024-02-28 Deep Learning for Engineers introduces the fundamental principles of deep learning along with an explanation of the basic elements required for understanding and applying deep learning models As a comprehensive guideline for applying deep learning models in practical settings this book features an easy to understand coding structure using Python and PyTorch with an in depth explanation of four typical deep learning case studies on image classification object detection semantic segmentation and image captioning The fundamentals of convolutional neural network CNN and recurrent neural network RNN architectures and their practical implementations in science and engineering are also discussed This book includes exercise problems for all case studies focusing on various fine tuning approaches in deep learning Science and engineering students at both undergraduate and graduate levels academic researchers and industry professionals will find the contents useful **PC World** ,2005-03 *Geek Monthly* ,2009 **Manufacturing Science and Technology, ICMST2011** Wu Fan, 2011-11-22 Selected peer reviewed papers from the 2011 International Conference on Manufacturing Science and Technology ICMST 2011 September 16 18 2011 Singapore **Progress in Informatics** ,2010
