Finance, Society and Sustainability Nick Silver, 2017-08-10 This book is a critical analysis of the impact of the financial system on the economy society and the natural environment It cuts through the noise to look at its purpose its activities and what it does in practice Unlike other books that cover the last financial crisis and the risk of another one this book is about the consequence of the financial system continuing in its current form It argues that the financial system is a construct of flawed economic theories designed in the hope that the market will efficiently allocate society's capital Instead the finance sector allocates savings and investment to maximize its own revenues with resulting collateral damage to the economy society and the environment Although governments try to preserve and regulate the existing system it is being replaced by a new system driven by technological innovation The book describes the opportunities this presents for a renaissance of the financial system to actually meet the needs of society and to re-engineer our economy to avoid environmental crisis The book is for anyone who would like to understand the finance system's purpose what it does in practice and its impact on the real world For those working in the industry it provides an overview of the system their place within it and how to bring about change For students and academics it provides a valuable critique of the financial system and the theories on which it is based For financial policymakers and regulators it identifies key challenges in their activities

Congressional Oversight Panel September Oversight Report United States. Congressional Oversight Panel, 2010
NOTE NO FURTHER DISCOUNT FOR THIS PRINT PRODUCT OVERSTOCK SALE Significantly reduced list price The Congressional Oversight Panel's 30th and final oversight report describes the financial crisis summarizes and updates the

Panel's prior oversight reports and evaluates federal financial stabilization initiatives. In order to evaluate the TARP's impact, one must first recall the extreme fear and uncertainty that infected the financial system in late 2008. The stock market had endured triple-digit swings. Major financial institutions including Bear Stearns, Fannie Mae, Freddie Mac, and Lehman Brothers had collapsed, sowing panic throughout the financial markets. The economy was hemorrhaging jobs, and foreclosures were escalating with no end in sight. Federal Reserve Chairman Ben Bernanke has said that the nation was on course for a cataclysm that could have rivaled or surpassed the Great Depression. As the TARP evolved, Treasury found its options increasingly constrained by public anger about the program. The TARP is now widely perceived as having restored stability to the financial sector by bailing out Wall Street banks and domestic automotive manufacturers while doing little for the 13.9 million workers who are unemployed, the 2.4 million homeowners who are at immediate risk of foreclosure, or the countless families otherwise struggling to make ends meet. It is now clear that although America has endured a wrenching recession, it has not experienced a second Great Depression. The TARP does not deserve full credit for this outcome, but it provided critical support to markets at a moment of profound uncertainty. It achieved this effect in part by providing capital to banks, but more significantly by demonstrating that the United States would take any action necessary to prevent the collapse of its financial system.
