

# Walking for weight loss

Do not underestimate walking as a means of losing weight only because during training, sweat does not flow and the muscles do not ache. In fact, it is very effective.

Any kind of walking is always energy expenditure, which invariably leads to losing weight. The only question is how many calories are burned in the process of such a sport. This indicator depends on such factors as initial weight and speed.

For 1 kg of weight for an hour is spent:

in the average tempo (3-4 km / h) - 3.2 kcal;

at a fast rate (6-7 km / h) - 4.5 kcal;

at a very fast pace, almost running (8-9 km / h) - 10 kcal.

In order not to make complex calculations yourself, you can use the following table:
