Optimized Inferencing and Integration with AI on IBM zSystems: Introduction, Methodology, and Use Cases

Makenzie Manna, Erhan Mengusoglu, Artem Minin, Krishna Teja Rekapalli, Thomas Rüter, Pia Velazco, Markus Wolff, IBM Redbooks, 2022-11-30

In today's fast-paced ever-growing digital world you face various new and complex business problems. To help resolve these problems enterprises are embedding artificial intelligence AI into their mission-critical business processes and applications to help improve operations, optimize performance, personalize the user experience, and differentiate themselves from the competition. Furthermore, the use of AI on the IBM zSystems platform where your mission-critical transactions, data, and applications are installed is a key aspect of modernizing business-critical applications while maintaining strict service level agreements (SLAs) and security requirements. This collocation of data and AI empowers your enterprise to optimally and easily deploy and infuse AI capabilities into your enterprise workloads with the most recent and relevant data available in real time, which enables a more transparent, accurate, and dependable AI experience. This IBM Redpaper publication introduces and explains AI technologies and hardware optimizations and demonstrates how to leverage certain capabilities and components to enable AI solutions in business-critical use cases such as fraud detection and credit risk scoring on the platform. Real-time inferencing with AI models, a capability that is critical to certain industries and use cases, now can be implemented with optimized performance thanks to innovations like IBM zSystems Integrated Accelerator for AI embedded in the Telum chip within IBM z16™. This publication describes and demonstrates the implementation and integration of the two end-to-end solutions: fraud detection and credit risk from developing and training the AI models to deploying the models in an IBM z/OS V2R5 environment on IBM z16 hardware and integrating AI functions into an application, for example, an IBM z/OS Customer Information Control System (CICS) application. We describe performance optimization recommendations and considerations when leveraging AI technology on the IBM zSystems platform, including optimizations for micro-batching in IBM Watson Machine Learning for z/OS. The benefits that are derived from the solutions also are described in detail, including how the open-source AI framework portability of the IBM zSystems platform enables model development and training to be done anywhere, including on IBM zSystems, and enables easy integration to deploy on IBM zSystems for optimal inferencing. Thus, allowing enterprises to uncover insights at the transaction level while taking advantage of the speed, depth, and securability of the platform. This publication is intended for technical specialists, site reliability engineers, architects, system programmers, and systems engineers. Technologies that are covered include TensorFlow Serving WMLz, IBM Cloud Pak for Data CP4D, IBM z/OS Container Extensions zCX, IBM CICS Open Neural Network Exchange ONNX, and IBM Deep Learning Compiler zDLC.
