Mental Health and Wellbeing: A guide for nurses and healthcare professionals working with adults in primary care Dr Sheila Hardy, 2022-01-11 Around 30% of people attending primary care have a mental health problem and the Covid 19 pandemic has seen an increase in anxiety isolation and other mental health issues In addition we have an aging population and more people coping with chronic physical and mental conditions All these factors mean that

healthcare professionals need more guidance on dealing with mental health and wellbeing Those with long term physical conditions such as diabetes are more likely to have mental health issues and will be healthier if both their physical and mental health are considered Those with severe mental illness and a learning disability are more likely to die early from a physical cause than the rest of the population and this group therefore needs proactive monitoring and encouragement to promote healthy behaviour People with dementia and their carers also need support to live well and those who are addicted to substances or specific behaviours need help to manage their dependence The Charlie Waller Trust <https://charliewaller.org> one of the UK's most respected mental health charities recognises this need and provides high quality training for GPs nurses and allied healthcare professionals in primary care to help them meet the holistic mental health needs of the people they see in healthcare settings every day Written by a registered general and mental nurse with 20 years clinical experience in primary care this helpful practical book serves as a manual to accompany the CWT training and as a learning resource in its own right

Mental Health Guide Haitham Al Fiqi, 2023-11-12 Most people think that mental health only applies to those people who have diagnosable mental disorders The truth is ALL of us should be concerned about our mental health It is our basis of being healthy It is the holistic approach to health In fact many people adhere to the belief that mental health is the core of healthiness Health starts and ends with mental health It encompasses everything and it is everybody's business For virtually all people mental health is often neglected until something apparently becomes wrong Until then we will have to wait for signs that it is vital to our existence to our well being to our relationships with other people to our perceptions to our fulfillment and even to our own happiness Even though we have achieved great medical advancements there still seems to be lacks in our general knowledge on mental health We have developed quick fixes to our physical ailments but we are left far behind with our solutions to mental illnesses If we have anything there still remain some loopholes and what we know is inconclusive We haven't developed universal treatments for psychological disorders and even assessments and diagnosis of such ailments are flawed In the past the general concept for being healthy is the absence of disease If so then someone who doesn't have diagnosable heart attack but experience irrational fear on something like chicken or heights is a healthy person In fact no While blood pressure cholesterol level and body temperature are easy to assess these are still seen as singular components of our health Disruptions in these mechanisms mean that a person could be physically ill However the health of a person is not only associated to how well his body functions but also to how well are his psychological emotional and social dispositions Manifestations of mental illness are much harder to assess since most symptoms occur discreetly during the developmental stages of the disorders and internal states are dependent on the subjective nature of the disorder For example someone who usually feels blue may or may not be diagnosed with depression We also have to take into account the social aspect of mental health People who have sickness have more obvious manifestations that they are ill therefore the society and immediate environment could easily identify whether or not a person is sick For mental health however ignorance could

lead to wrong perceptions For example a teenager who became drug dependent and later committed suicide is viewed as irresponsible and desperate when in fact he may be suffering from a psychological disorder A simplistic definition to mental health could be successful mental functioning But what are the parameters of this definition What could possibly tell us that someone is struggling through mental illness a Someone who is distressed for a prolonged period without apparent logical reason b Someone who has disruptions in thinking c Someone who has altered behaviors and moods d Someone who relies on substances such as drugs alcohol and cigarettes may have issues on their mental health e Someone who has impaired social functions These are just representations of how a person with mental health may behave However these are not conclusive bases As we may yet to understand mental health is directly correlated with physical ailment or health Both may be one and the same but are very different in nature This eBook sheds light on the most important topics in the field of mental health and answers many questions This eBook is useful for students teachers nurses workers and anyone interested in the field of mental health Buy this eBook now [Mental Health Literacy: How to Obtain and Maintain Positive Mental Health](#) Carlos Sequeira, Francisco Sampaio, Lara Guedes De Pinho, Odete Araújo, Maria Teresa Lluch, Lia Raquel De Sousa, 2022-11-15
